1. Project Objectives

Train teachers from the Ministry of Education in the use of ICT tools to improve their teaching performance, in order to promote educational innovation and learning online.

Train priority attention groups or digitally illiterate groups in the use of ICT tools to apply what they have learned in their daily lives, promoting their digital inclusion and improving their quality of life.

2. Objective of the Manual

The purpose of this manual is to provide a clear and accessible guide in the use of Microsoft Word, especially aimed at people with low levels of familiarity with computing. The main objective of the document is to facilitate the learning and practical application of the essential functions of Word, allowing users to improve their skills in the management of this fundamental tool for written communication.

3. Scope

This manual is designed to provide clear and accessible guidance to people with limited digital experience, especially those who are at the beginning levels of digital literacy. The main purpose is to facilitate the understanding and use of the Microsoft Word application, addressing everything from the most basic steps to elementary editing and text formatting tasks.

Included are detailed explanations on how to open the application, create a new document, and perform essential functions such as changing the format, font, and color of text. Additionally, special attention is paid to providing simple descriptions of the Word user interface and workspace elements, with the goal of fostering a solid understanding and confidence in using this tool.

This manual aims to be a useful resource for those looking to acquire basic digital skills, offering a friendly and gradual introduction to the essential functions of Word.

4. Addressed to

This document is specially designed to meet the needs of people who are part of priority care groups or who have low levels of digital literacy. The main focus is on those individuals who are taking their first steps in the digital world and who require a clear and accessible introduction to the use of Microsoft Word.

The manual is specifically tailored to the experiences and challenges faced by digitally illiterate people, providing a friendly, step-by-step approach to exploring Word's initial interface. The aim is to provide a resource that allows them to acquire basic skills for creating and editing text documents, thus contributing to their digital inclusion and promoting an increase in their technological autonomy.

5. Application introduction

Microsoft Word, a tool that goes beyond being a simple word processor, is presented as a fundamental element in the fabric of written communication. It is not only limited to capturing letters on a screen, but it redefines the way we conceive and share information. From professional to academic to personal, Word stands as a versatile platform that adapts to various writing needs.

In today's digital world, the ability to create documents becomes an essential skill. Microsoft Word simplifies this process by providing an intuitive interface that makes it easy to generate content from technical reports to touching personal letters. This versatility democratizes written expression, allowing users of all levels of experience to bring their ideas to life clearly and effectively.

The application is not only limited to document creation but also acts as a powerful tool for editing and formatting. Features that allow you to adjust the layout, style and structure of the text provide complete control over the visual presentation of the content. This aspect is not only aesthetic, but also becomes a valuable ally for those seeking to visually impact their audience.

The integration of Microsoft Word with other tools within the Office suite adds an additional level of efficiency to information management. The ability to synchronize and share documents between different applications improves productivity and simplifies workflow, which is especially valuable in professional and academic environments.

Among the main reasons that explain the success of this software we can highlight the following:

- a. Editing the text is really simple and can be undertaken using a long list of resources.
- b. Its appearance and use is very easy, with basic knowledge it can be used without problem
- c. It gives the possibility of being able to view the final result of the work before being printed.
- d. It has very useful tools when it comes to obtaining a great result. We are referring to both the spell checker and the different styles and formats.
- e. Keyboard shortcuts can be used, with key combinations, which make the work much faster.

Those who find disadvantages in the Word problem come to state that it is too basic, that it constantly requires updates or that it is not free.

It is important to highlight, in this context, that Word is a software whose license is the property of Microsoft. People who want to use the program must acquire the corresponding license. This differentiates Word from other word processors whose distribution is free (freeware).

In short, Microsoft Word stands as a dynamic platform that goes beyond the expectations of a simple word processing program. This manual dives into the fundamental features of Word, unraveling its potential and giving users, even those with little digital experience, the tools necessary to get the most out of this application and significantly improve their word processing skills. Word thus becomes the catalyst that drives the evolution of written communication in the digital age, democratizing expression and empowering users to share their ideas in a more impactful and effective way.

6. Basic notions

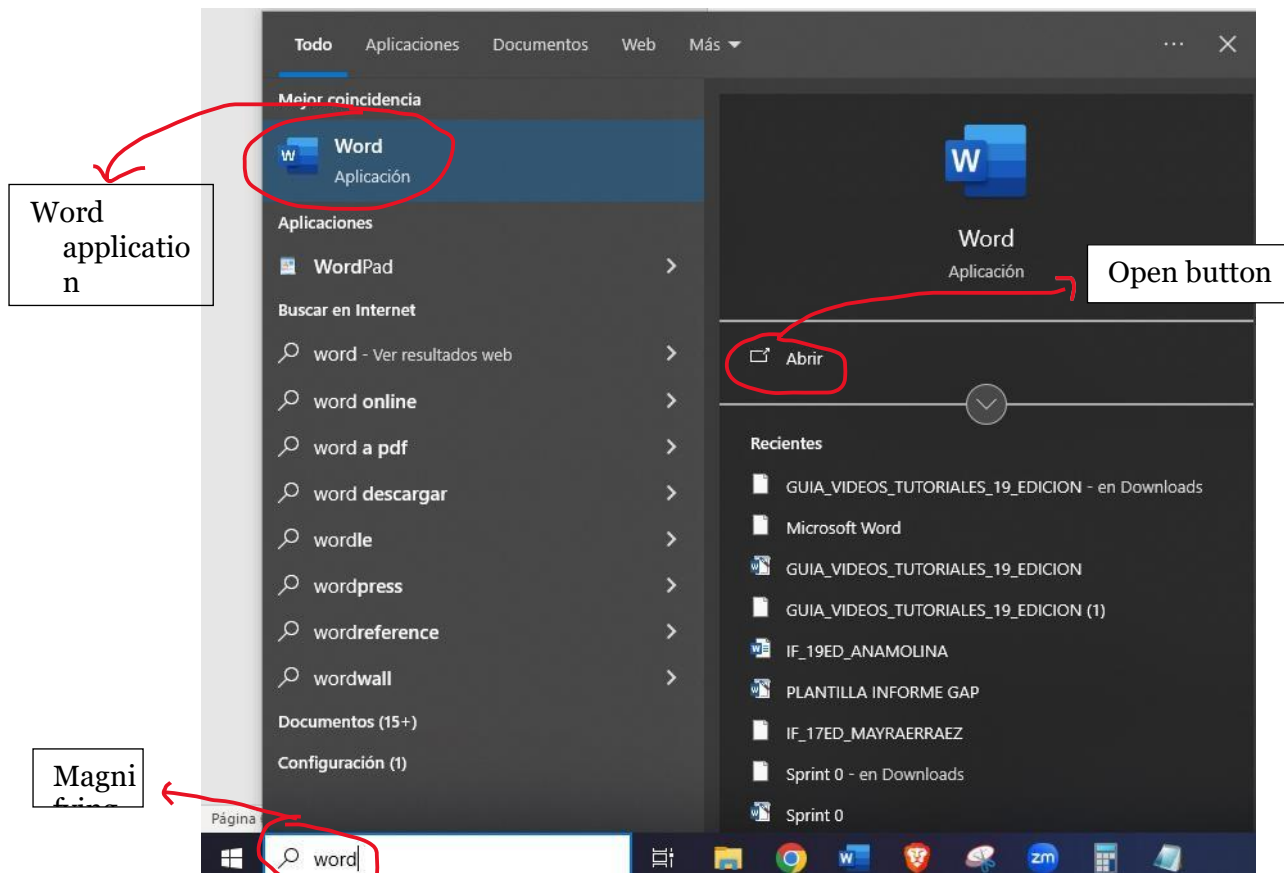

Before venturing into Microsoft Word, it is crucial to have some basic knowledge that will allow you to open the application and start exploring this digital space. These are the keys to start your journey in Word:

- **Word icon on the desktop:** Look for the Word icon on your desktop or in the applications menu. A double click will open the application and take you directly to the main Word page.
- **Windows Start Menu:** You can open Word from the Windows Start Menu. Find Microsoft Word in the list of installed applications and click to open the application.
- **Search bar:** In your operating system's search bar (like the magnifying glass in Windows), simply type "Word" and select the app in the results to open it.
- **Shortcut in Taskbar:** If you've pinned Word to your taskbar, you can open it directly from there by clicking the corresponding icon.
- **From an Existing Document:** If you already have a Word document saved, you can open Word by double-clicking that document. This will also take you directly to the app.
- **Menu Bar:** It contains the main options like File, Home, Insert, Layout, etc.
- **Options:** Organized in tabs (Home, Insert, Design, etc.) with specific tools in each one.
- **Work area:** Where the document is edited and viewed. It can contain text, images, tables, etc.
- **Toolbar:** Bar with icons for frequent functions such as save, print, copy, etc.
- **Status bar:** Displays information about the document, such as the page number and number of words.
- **Document:** Space where the content is created.
- **Text:** Words and phrases that make up the content of the document.
- **Format:** Style applied to text, such as bold, italic, underline, and font and color changes.
- **List:** A set of organized elements, it can be ordered or unordered.
- **Image:** Visual representation inserted in the document.
- **Board:** Two-dimensional structure that organizes information in rows and columns.
- **Headery Footer:** Top and bottom areas of the document to add repetitive information, such as titles or page numbers.

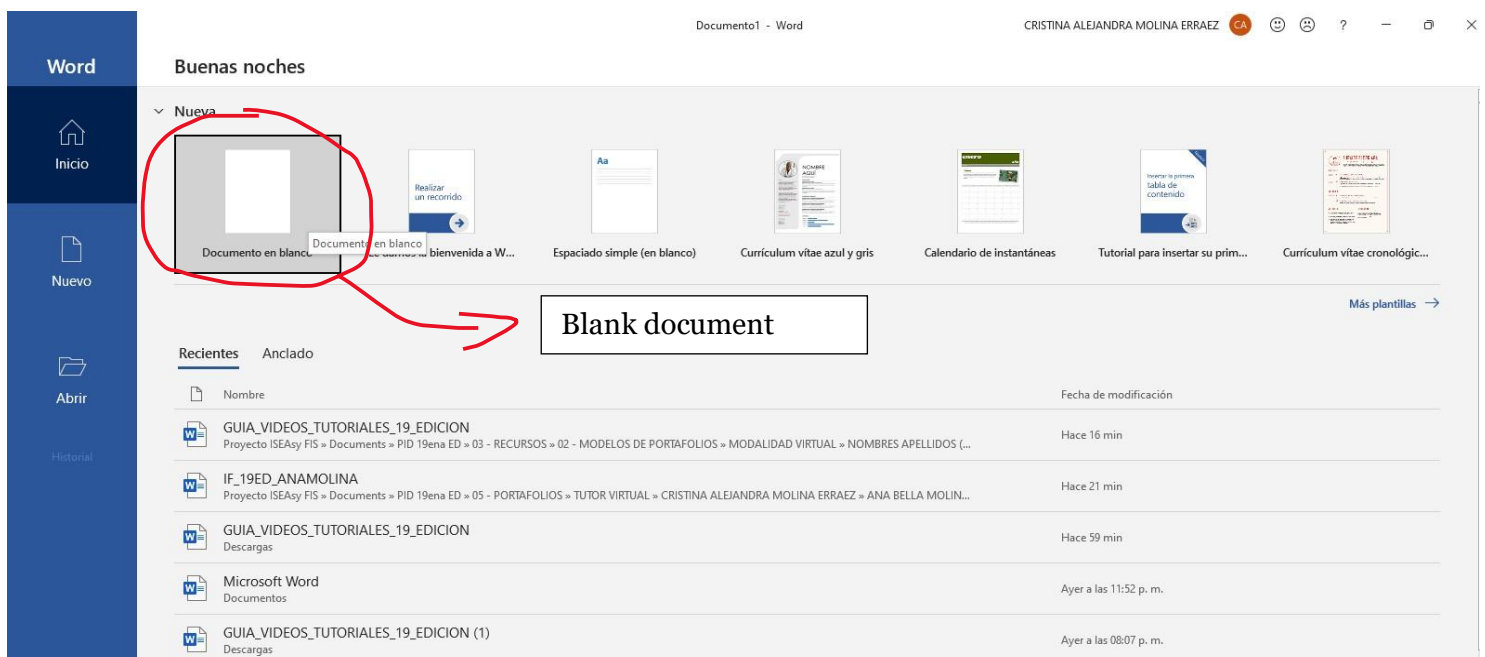

It's important to understand the Word workspace. The interface includes tools such as the magnifying glass to search for the application, the option to open a new document and functions to format text. Getting familiar with these elements will make using the application easier.

7. Steps to follow

To open Word, we have to write the word Word in the magnifying glass and left click on the Word application or click the open button.

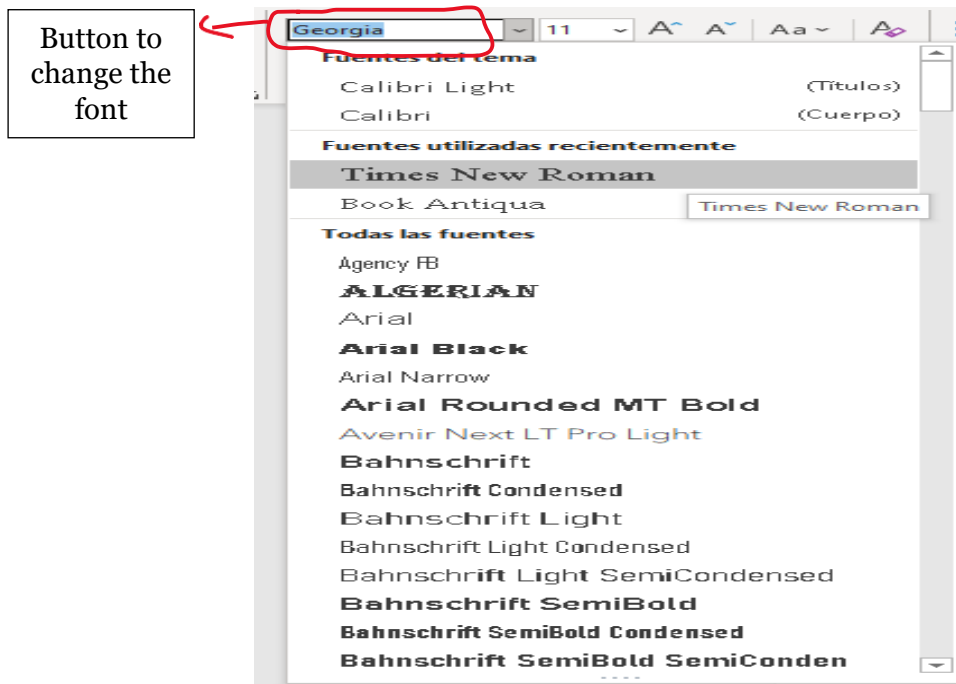

When we open we have this interface, to open a new Word we simply click on “Blank document” and a sheet will open in Word.

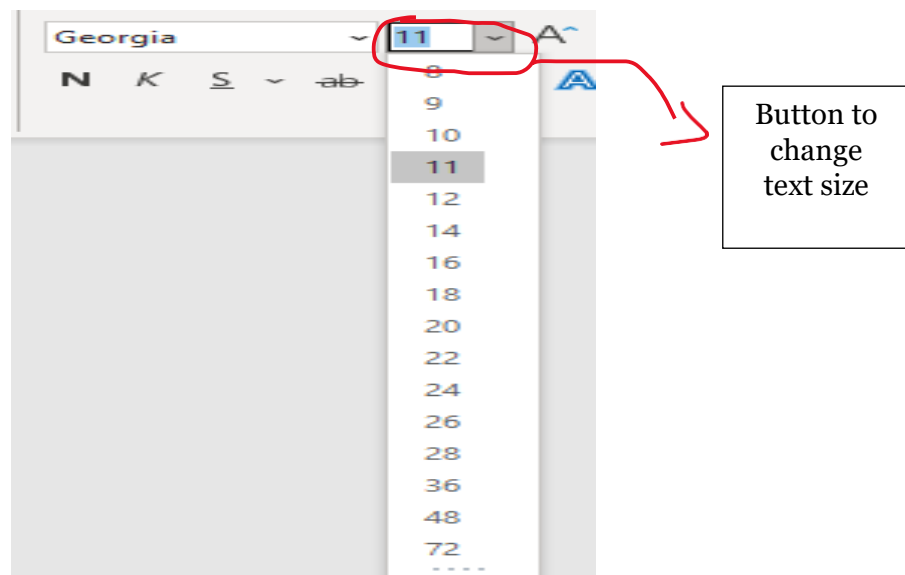

Once opened, we will be able to perform several operations, let's explore them:

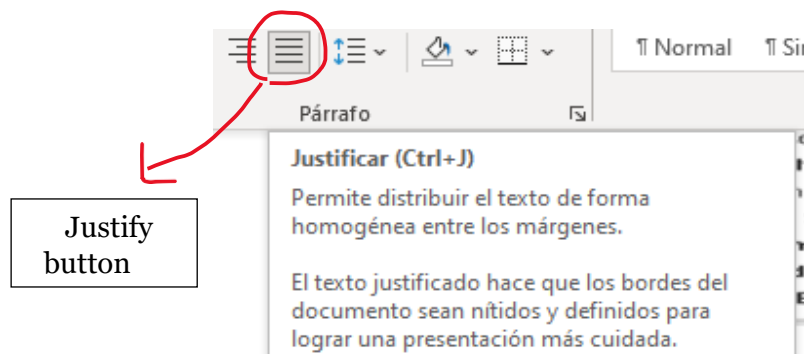

1. **Change text font:** To change the text font, we are going to select the text that we want to change the font, and we are going to go to the font button, we left click on it and a drop-down menu will be shown, and we choose the font we want.

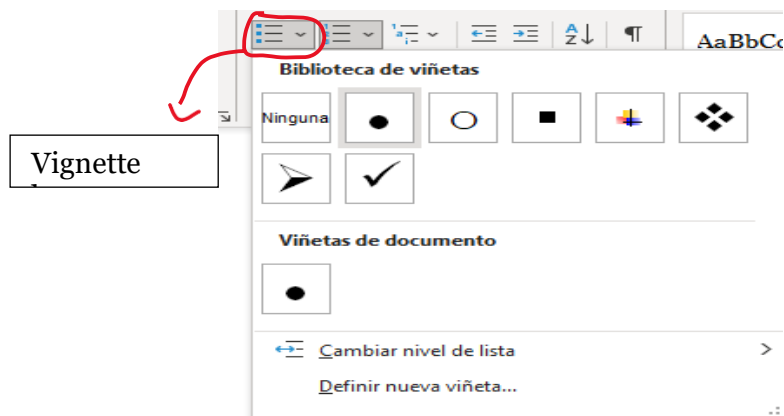

2. **Change font size:** To change the text size, we are going to select the text that we want to change the size, and we are going to go to the font size button, we left click on it and a drop-down menu will be shown, and we choose the size we want.

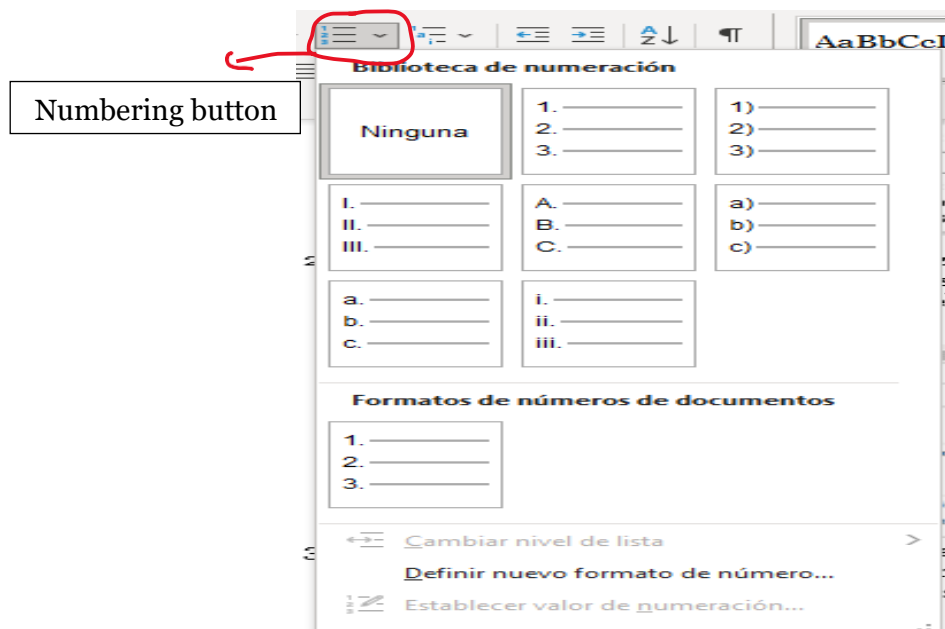

3. **Justify the text:** To justify the text, we are going to select the text and we are going to go to the "justify" button, we left click on it and we would have the text justified.

4. **Unordered list:** In order to make an unordered list, we are going to select the text that we want to list, and we are going to go to the “vignette” button, where several designs of the vignette will be displayed, we select the one we like and we would have the list not tidy.

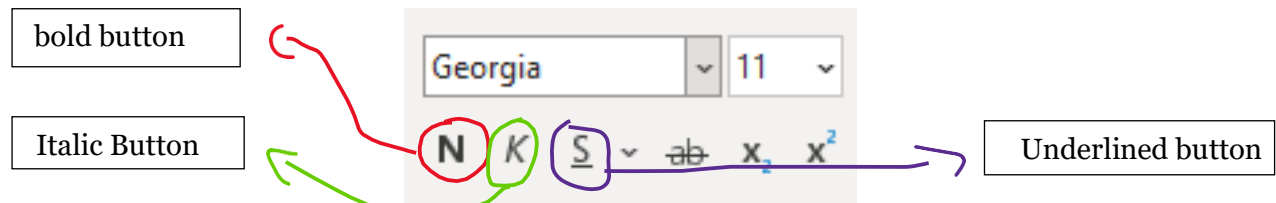

5. **Sorted list:** In order to carry out an unordered list we are going to select the text that we want to list, and we are going to go to the “numbering” button, it will display several designs that we can choose from, we select the one we like and we would have the unordered list.

6. **Bold:** To be able to bold we are going to select the text we want, and we are going to go to the bold button, it has an N as a shape, we left click on it and we would have our text in bold.

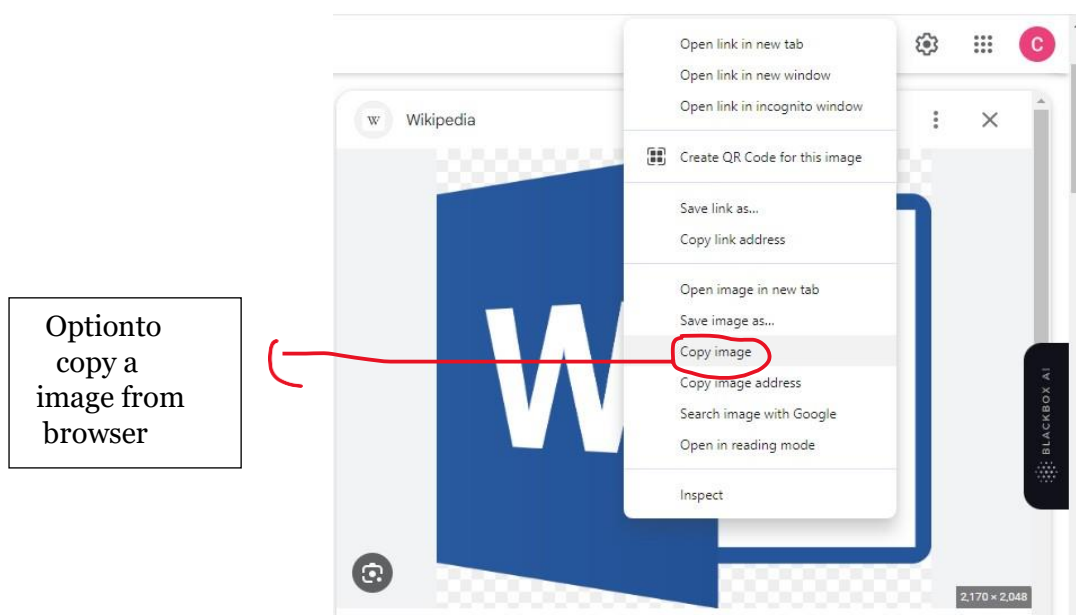

7. **Italics:** To be able to italic we are going to select the text we want, and we are going to go to the bold button, this has a K as a shape, we left click on it and we would have our text in italics.
8. **Underlined:** In order to underline our text we are going to select the text we want, and we are going to go to the underline button, it has an S shape, we left click on it and we would have our text in bold.

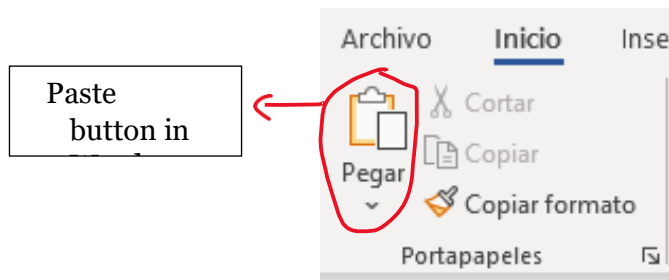

9. **Change text color:** To change the text we are going to select the text we want and we are going to go to the font color button, this has the shape of A, in which several color options will be displayed, we choose the one we want and left click on it.

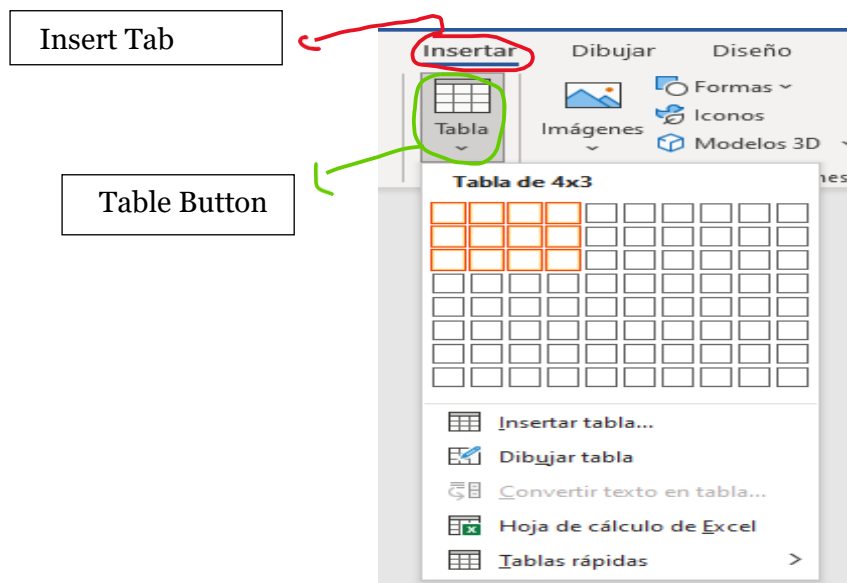

10. **Insert image:** To insert an image in Word, first we are going to go to our browser, look for the image we want and once found, we are going to right click, then on the copy image option. Once we have the image, we return to Word and press the paste button.

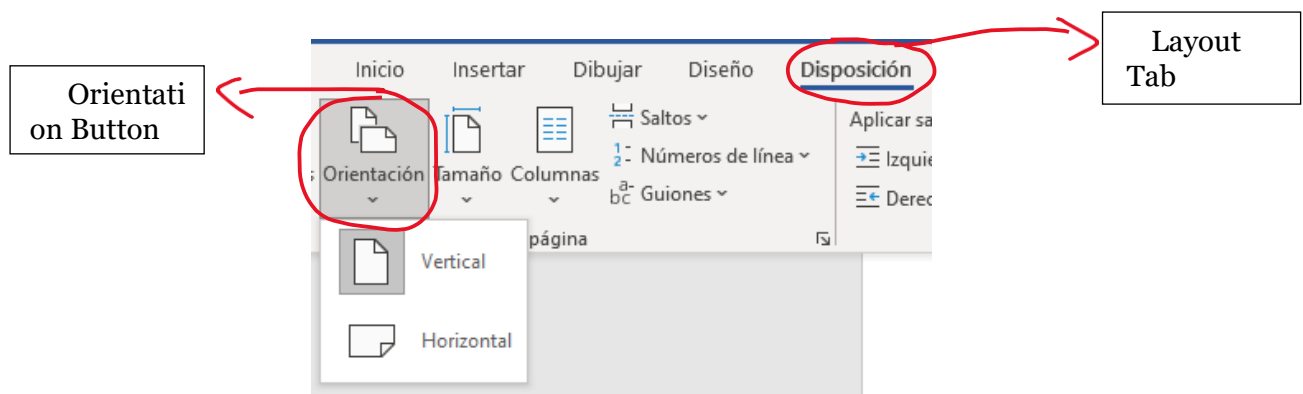

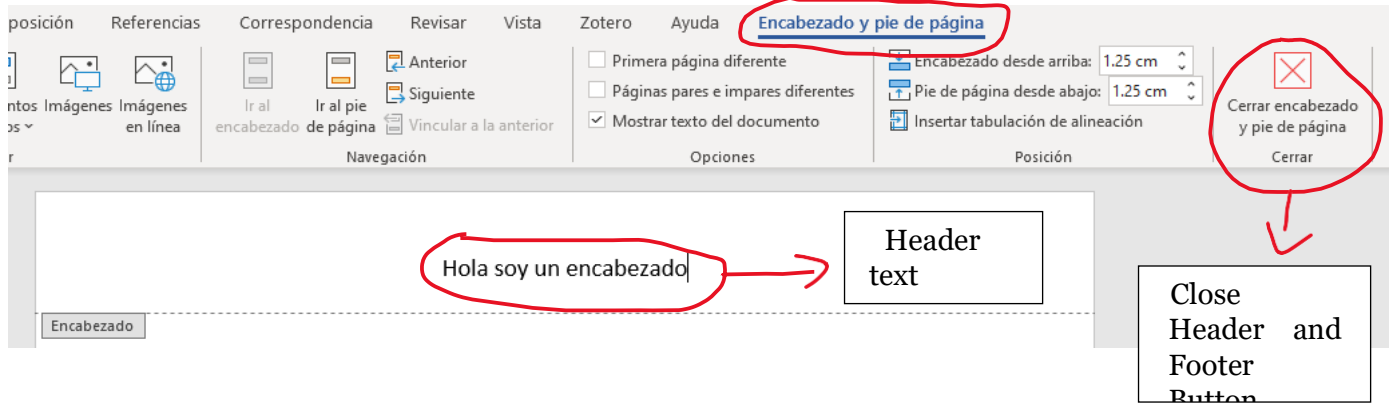

11. **Boards:** To insert a table in Word we are going to go to the insert tab, in it we will find the table button, we click on it and a grid will appear, in it we will be able to choose the size of our table, we choose the size and we click left click.

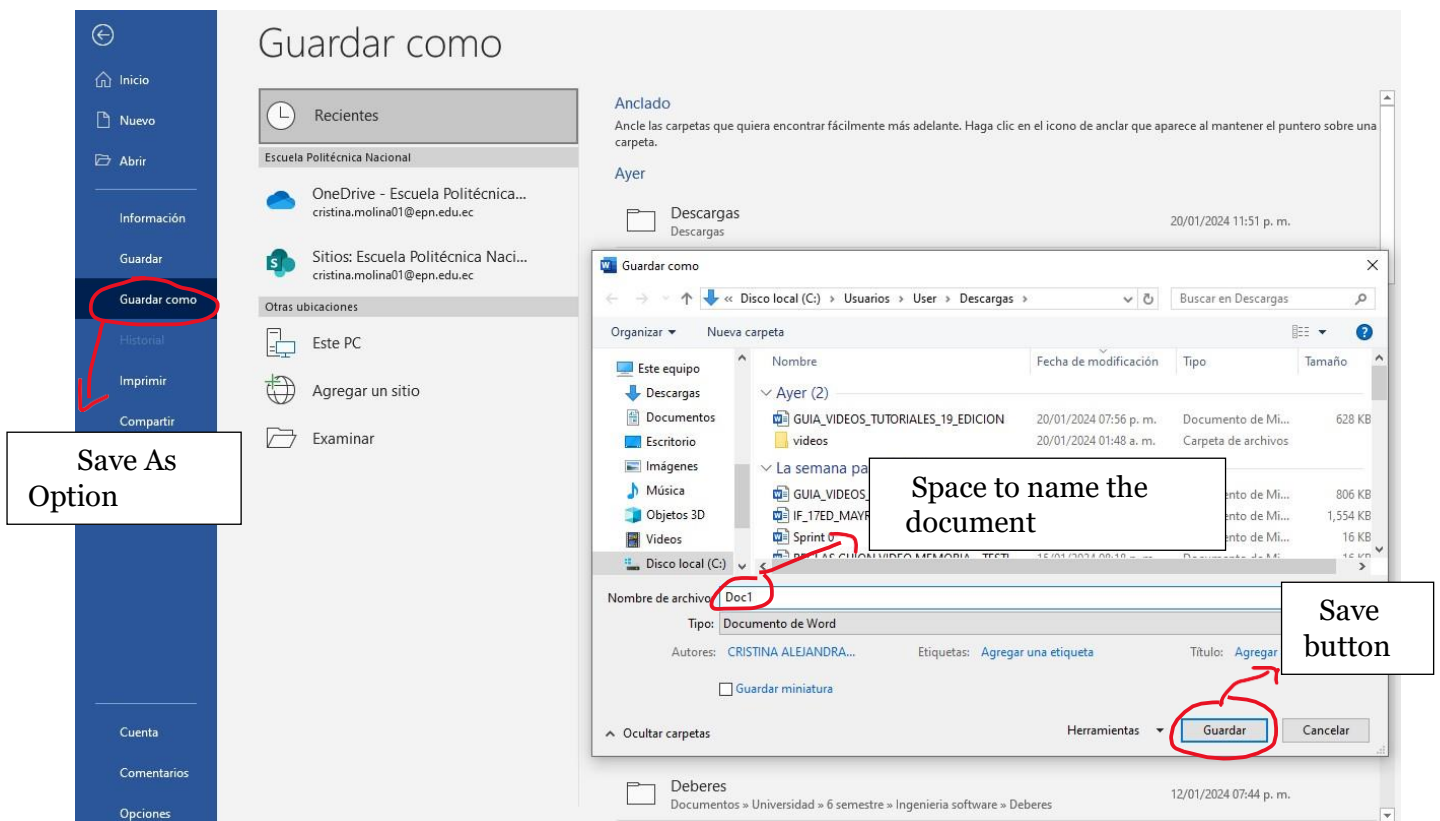

12. **Change Orientation:** To change the orientation in Word we are going to go to the layout tab, then we will go to the orientation button, there we choose between horizontal and vertical, we click on it and we would have it.

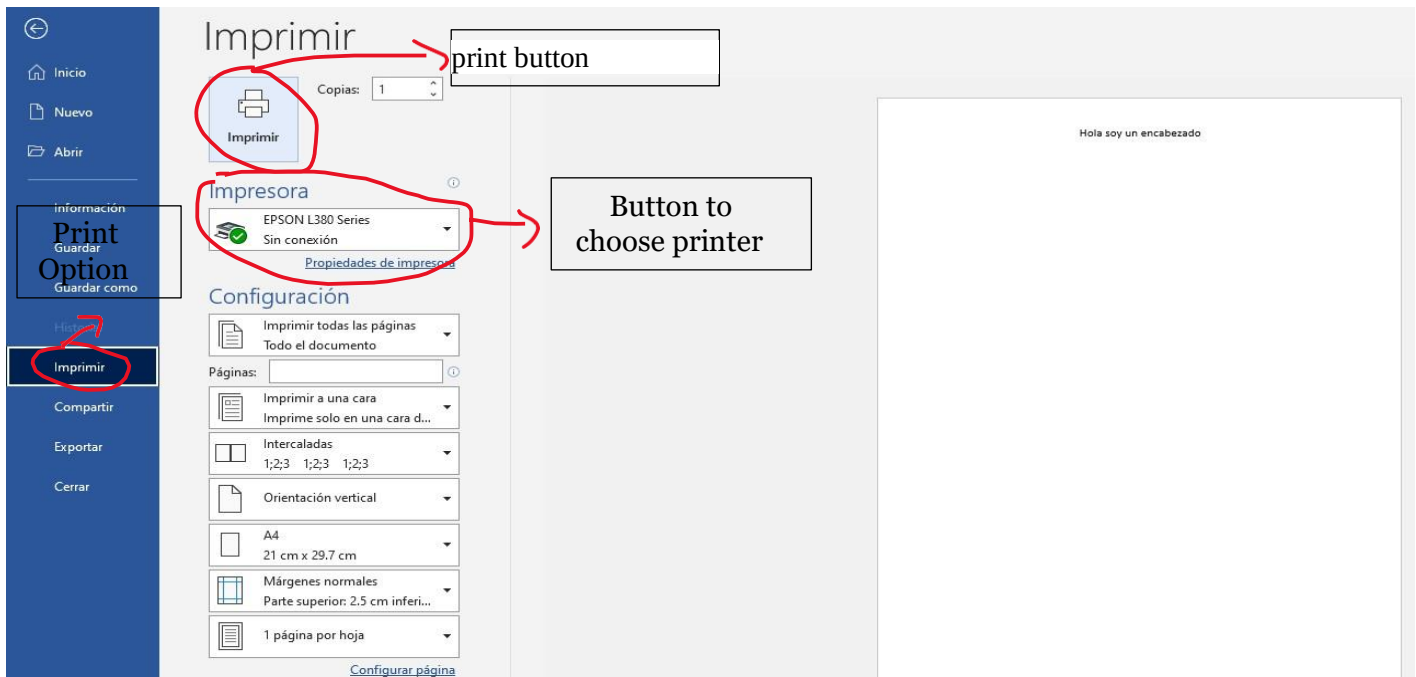

13. **Set header and footer:** To add a header to a Word we will go to the beginning of the page, we will double click on it, with this we will open the header and footer tab, and a space will open on our Word page that will be with broken lines, that is where we are going to write our text for the header, once this is done we are going to press the close the header button.

14. **Save document:** To save our document we are going to go to the file tab, this will open a new interface, we are going to go to Save As, here we will be able to choose where we want to save our document, the file explorer will open, here we go Enter the name of the document and press the save button.

15. **Print the document:** To print the document we are going to go to the file tab, another interface opens, in it we are going to choose the print option, we check that our printer is connected to the computer, and we are going to click on the print button.

8. Frequent questions

- **How do I start Word and start a new document?**

To open Word, look for the word "Word" in the magnifying glass and left-click on the application. Then, select "Blank Document" to create a new document.

- **How do I change the appearance of the text?**

If you want to change how the text looks, select the words and use the toolbar on the "Home" tab to adjust the font, its size, color or styles.

- **How do I add an image to my document?**

To add an image, search for the image you like online, copy it, and paste it into your Word document.

- **How do I create lists in my document?**

If you need to make a list, select the lines of text and use the options on the "Paragraph" tab to make a bulleted or numbered list.

- **How do I change the shape of the page?**

If you want the page to be taller or wider, go to the "Layout" tab and choose the "Orientation" option. You can select between vertical or horizontal.

- **How do I add headers and footers?**

Double-click at the top or bottom of the page. This will open a special space where you can type things you want to appear on all pages, such as a title or page number.

- **How do I save and protect my work?**

Go to "File," select "Save As," choose where you want to save your document, and give it a name. This ensures that you don't lose your job.

- **How do I print my document?**

Under "File," select "Print." Make sure you have a printer connected and choose the printing options you prefer. Click "Print" and you will have a paper copy of your document.

9. Glossary

Term	Description
Application	Computer program that performs specific functions
Blank document	Standard template for starting a new document without any pre-formatting.
Recent and Pinned	Section in the "Home" tab that shows recently worked documents and those pinned for quick access.
Interface	Space where you interact with the application
Magnifying glass	Search tool on computer
Menu Bar	The bar at the top with options like File, Insert, Layout, etc.
Work area	The main space where you edit and view your document.
Toolbar	Bar with icons that represent frequent functions.
List	A set of organized elements, whether ordered or not.
Header and footer	Top and bottom areas for information that repeats on all pages.
Orientation	The direction of the page, which can be vertical or horizontal.

These terms will help you better understand the Word interface and make your experience using the application easier.
