## **1. Project Objectives**

To train Ministry of Education teachers in the use of ICT tools to improve their teaching performance, in order to promote educational innovation and online learning.

Train priority groups or digital illiterates in the use of ICT tools to apply what they have learned in their daily lives, promoting their digital inclusion and improving their quality of life.

## **2. Objective of the Manual**

To train Ministry of Education teachers and priority groups or digital illiterates in the mastery of basic operations on the Internet through a practical guide. The main objective of this manual is to provide the necessary skills to successfully perform fundamental operations in the digital environment, allowing users to effectively integrate ICT tools in their daily lives. The ultimate goal is to promote digital inclusion, improve teaching performance and enrich the quality of life of the participants.

## **3. Scope**

The scope of the project will focus on the delivery of training sessions using exclusively videographic material, delving into basic internet operations. The sessions will be designed to be accessible virtually, giving participants the flexibility to learn at their own pace. Content will be presented through practical examples and real-world situations, ensuring a thorough understanding of basic internet operations without requiring face-to-face attendance.

## **4. Aimed at**

This project targets two main groups:

- Ministry of Education teachers: It will focus on providing teachers with visual and practical resources to improve their proficiency in basic Internet operations, thus facilitating the integration of these skills into their teaching practices.
- Priority groups or digital illiterates: The training will be adapted to be completely visual, allowing this group to learn through videos and multimedia resources. This will ensure that barriers to accessing digital information are effectively overcome, promoting inclusion and improving the quality of daily life of participants.

## 5. Application introduction

The Internet is a global network of interconnected computers that facilitates worldwide data exchange and communication. In this context, the constant availability of information, 24 hours a day and in any location on the planet, offers a variety of services that will be discussed in detail in this manual. We will focus on essential operations that enable the effective management of the Internet:

- 1) Web browsers
- 2) Internet search
- 3) Content Streaming
- 4) On-line purchase
- 5) Online collaboration (videoconferencing)
- 6) Online security

These operations, fundamental to the proper use of the Internet, will be covered in detail in this manual, providing users with the necessary skills to use the network safely and effectively.

### 5.1. Web browsers

A web browser is software that allows you to access and interact with websites, view multimedia content, run online applications, etc. Some popular browsers are:

- Google Chrome: The most widely used globally, with more than 70% of the market. It offers great browsing speed, an extensive application store and allows data synchronization on all devices linked to the same Google account. Its main disadvantage is its high use of system resources.

*Figure 1*  
*Google Chrome*

- Mozilla Firefox: The second most popular browser, with about 9% market share. It stands out for its stability, resource efficiency and extensive set of tools for web developers. It has recently added features focused on privacy and security.

Figure 2  
Mozilla Firefox

- Microsoft Edge: Developed as a replacement for Internet Explorer for Windows 10 systems, it is distinguished by its speed, simplicity and intuitiveness, making it ideal for novice users. It has an optimal integration with Microsoft services and applications, in addition to low resource consumption. It is not so popular due to the previous bad reputation of Internet

Explorer.

Figure 3  
Microsoft Edge

- Opera: This innovative browser has about 3% of the global market. It incorporates unique capabilities such as integrated messaging applications and free VPN mode for private browsing. It is also very well optimized to operate with fewer resources. Its main disadvantage is its scarce updates.

Figure 4  
Opera

In conclusion, although Chrome is preferred by users, other browsers such as Firefox and Opera have distinctive functionalities for certain user profiles.

## 5.2. Internet search

The Internet search allows you to find specific information among the large volume of data available on the web using keywords related to the topic under investigation.

The most popular and widely used web search engine globally is Google. Other well-known search engines are Microsoft's Bing and DuckDuckGo, the latter focused on privacy. The steps to perform an effective search on Google or another search engine are:

1. Choose keywords relevant to what you are looking for.
2. Review the results and click on the most pertinent one
3. Read the information on this website
4. If necessary, use other keywords to refine your search
5. Repeat these steps until the desired information is found.

By searching the Internet, you have quick and easy access to a wide range of information on any subject.

### **5.3. E-mail:**

Electronic mail or e-mail is an online service that, like conventional postal mail, enables the sending and receiving of messages to multiple recipients through a network of services. To make use of this service, we only require:

- A device with Internet connection.
- An e-mail manager.
- An associated email account.

We have different functions, for example:

1. Associate our devices (smartphone or computer). - Our email account allows us to associate one or more devices.
2. Signing up for online services and platforms. - Many websites ask for an e-mail address when registering and logging in. For example, when using a platform to watch series and movies.
3. Making online purchases. - Similarly, online shopping platforms require our email address to verify our account, send us notifications and as part of the personal information they request from us.
4. Request the contracting of other services. - E-mail becomes essential when contracting services for the home or when doing business with government entities.

In short, our email account serves as a means to validate our identity in a wide variety of services, which is why it is essential to learn how to protect it to prevent its security from being vulnerable. Some tips for this are:

- Use strong passwords, which have more than 10 characters, with uppercase, lowercase, numbers and special characters.
- Do not share our passwords.
- Use an alternative email account, this is to register in web sites that we do not trust or that we want to register in a service temporarily.
- Ignore suspicious emails, some emails may contain malicious links or attachments that seek to steal our account or infect our devices.
- Use two-step verification, an example of this, is to have a code sent to our device every time we log in.

- To apply antispam filters, this joins to the mails with malicious purposes, from our manager of mail we can accede to the configurations to prevent that these messages arrive at our inbox.
- Cancel subscriptions, when we no longer want to receive notifications on a regular basis, filling our inbox, we can delete the subscription.
- Performing backups.

E-mails can be classified into several categories: According to their origin:

- Personal email: email accounts that you create yourself in services such as Gmail, Outlook, Yahoo Mail, etc. For your own use.
- Institutional/corporate email: these are email accounts provided by companies, organizations or educational institutions for their members. They are used for internal communication.
- Commercial mail: EMAILS used by brands or businesses to send advertising or communicate with customers.

According to its content:

- Transactional e-mail: These are automated messages sent after making an online purchase, registering for a service, receiving a bank transfer, etc.
- Advertising mail: They contain advertisements, promotions or offers. They may be from services to which you are subscribed or spam.
- Mass mailing: The same EMAIL is sent to a large number of recipients at the same time. For example, informative or congratulatory mass mailings from a company.
- Personal mail: They send exclusive information from person to person for particular reasons.

The most popular email managers are ***Gmail, Outlook and Yahoo Mail***. They allow you to create an account, compose and send emails, store them, among other functions.

## 5.4. Content streaming

Streaming allows access to multimedia content (videos, movies, series, music, etc.) in real time over the Internet, without the need to download it to a device. It only requires a stable and fast internet connection.

Types of streaming:

- Live Streaming: transmit events such as awards, concerts, news, etc. as they happen.
- Video streaming: movies, series, video clips, etc. hosted on services such as YouTube, Netflix, Amazon Prime Video, etc. Some free, others require subscription.
- Music streaming: access songs on demand from platforms such as Spotify, Apple Music, etc. Replaced digital downloads and physical sales.
- Streaming video games: play titles from a library without the need for specific hardware or capabilities.

Popular devices for streaming, there is a wide variety of devices such as smart TVs, laptops, cell phones, video game consoles. Each has unique functions.

## Common problems and solutions

- Low internet speed: causes interruptions and poor quality. Minimum 5 Mbps recommended for HD streaming.
- Geographical restrictions: some content is only available in certain countries.
- Security risks: it is recommended to use antivirus software and to take precautions when visiting unknown websites.

### 5.5. On-line purchase

E-commerce or electronic commerce is the buying and selling of products or services over the Internet.

How does it work?

- The customer enters the online store, selects the products, adds them to a virtual shopping cart and makes the payment.
- The order is then processed and shipped to the buyer's home through logistics companies.

To make an online purchase, what is needed are three things: a device with Internet access (computer, tablet or smartphone), the website of the company that sells what we want to buy and a means of payment.

### 5.6. Online collaboration

#### **Videoconferencing**

Videoconferencing is a form of communication between two or more individuals that takes place in real time using the Internet and devices with integrated camera and microphone.

This technology allows visual meetings, chats or any personal or professional exchange to be held regardless of the physical location of the participants, since the conversation is established virtually by video camera.

Among its essential functionalities are:

- Simultaneous display of all participants
- Screen sharing to show presentations, images, etc.
- Record sessions for later reference or sharing
- Integrated text chat for instant communication
- Sending attachments
- Host control over attendees' microphones, cameras and chat.
- 

### 5.7. Internet Security

Security is all those precautions that are taken to protect our data.

Passwords

- Create complex passwords by combining letters, numbers and symbols. Never use your name or date of birth.
- Do not share your passwords with others. Keep them secret.
- Change your passwords from time to time, approximately every 3 to 4 months.

Emails and messages

- Do not open e-mails or messages from unknown persons. They could contain viruses.
- Be wary of email offers and prizes that seem too good to be true.

#### Websites

- Access only known and trusted websites. Verify that they have "https" at the beginning.
- Do not share personal information (address, phone number, etc.) unless it is in a secure location.

#### Antivirus

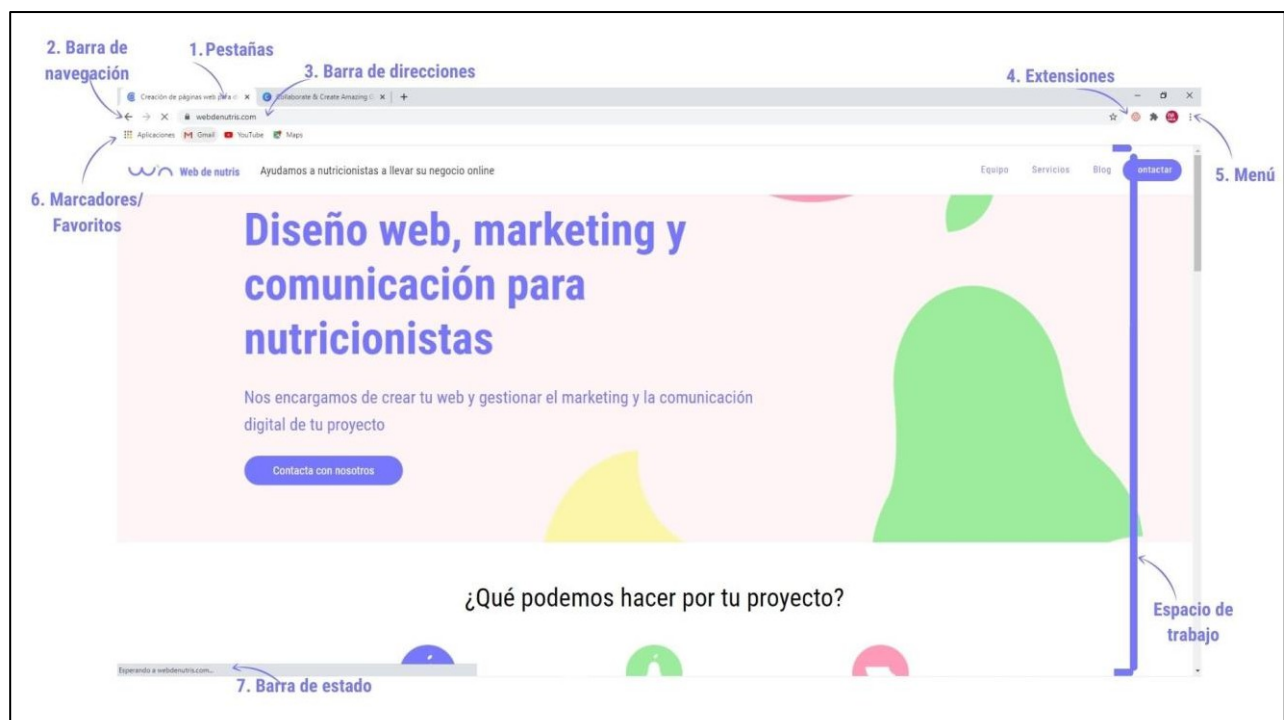

- Install an antivirus on your computer and cell phones to prevent viruses and malware. Avast Antivirus is a good free option.

## 6. Basic Notions

In this section, the essential knowledge that the user must have before starting to use the application will be detailed. The application workspace will be described in detail, highlighting the elements that compose it and its functionality. In the context of our topic on basic Internet operations, key concepts such as navigation within the interface, identification of internal and external links, and effective use of e-mail will be addressed. These basic notions will provide the user with a solid understanding of the digital environment he/she will face, thus facilitating a more effective and safe handling of the application.

## 7. Steps to follow

### 7.1. Web browsers

- 1) Tabs: Elements that allow you to quickly switch between different contents in the same window, making it easier to switch between them without opening new windows.
- 2) Navigation Bar: Provides functions such as backward, forward, reload and stop loading for easy navigation.
- 3) Address Bar: Displays the current URL and allows the user to enter addresses, often with suggestions as you type.
- 4) Extensions: Specific applications to perform tasks during navigation, which can be added according to the user's preferences or needs.
- 5) Menu: Represented by three vertical dots, it provides access to various navigation, configuration and download functions, among others.
- 6) Bookmarks: Store the location of web pages for quick access in the future, called favorites or bookmarks depending on the browser.
- 7) Status Bar: In web browsers, it shows the loading progress of a page or the address of a hyperlink when the cursor is placed over it.
- 8) Work Area: Space where the web page is loaded and where the user interacts with its content.

## 7.2. Internet search

1. We identify our browsers on the desktop. With double click we enter our browser.

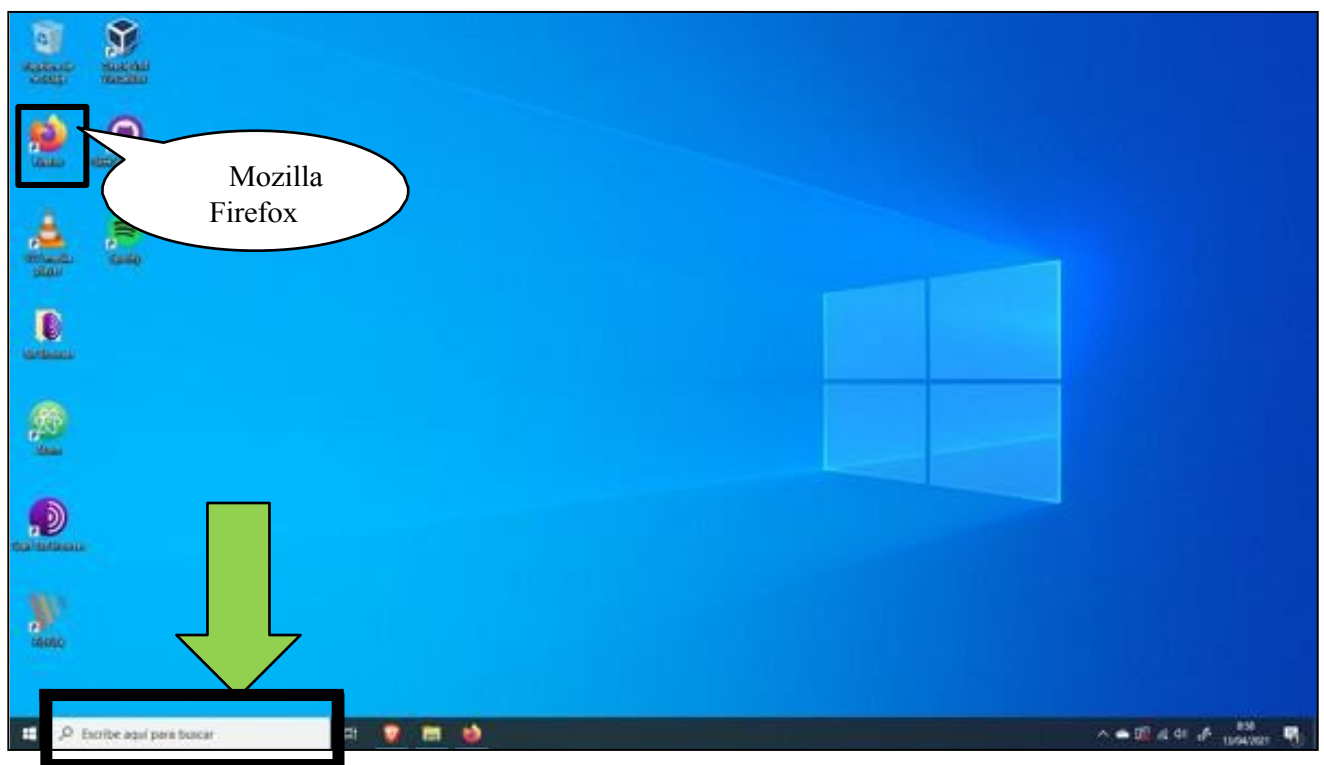

Image 1

If the icons of the browsers mentioned in the manual, and generally the most used ones, are not visible, we proceed to look for them in the magnifying glass marked with an arrow (image 1), here we enter the name of our browser and we will be able to see the icons. As follows:

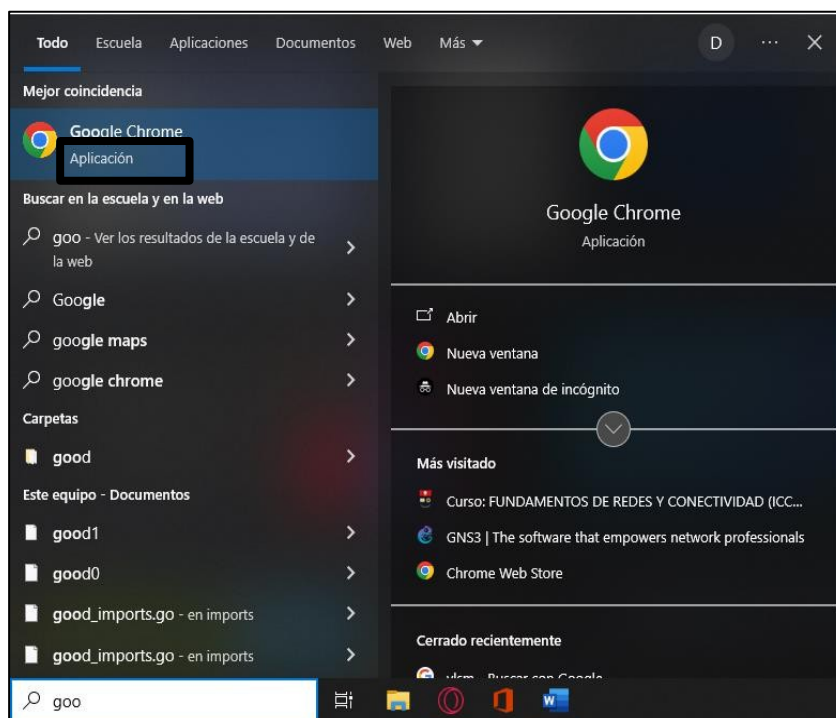

Image 2

In image 2 we can see our Google Chrome and highlights the word "application", this means that we have the browser on our computer, however, if we do not have the browser, it will look like this:

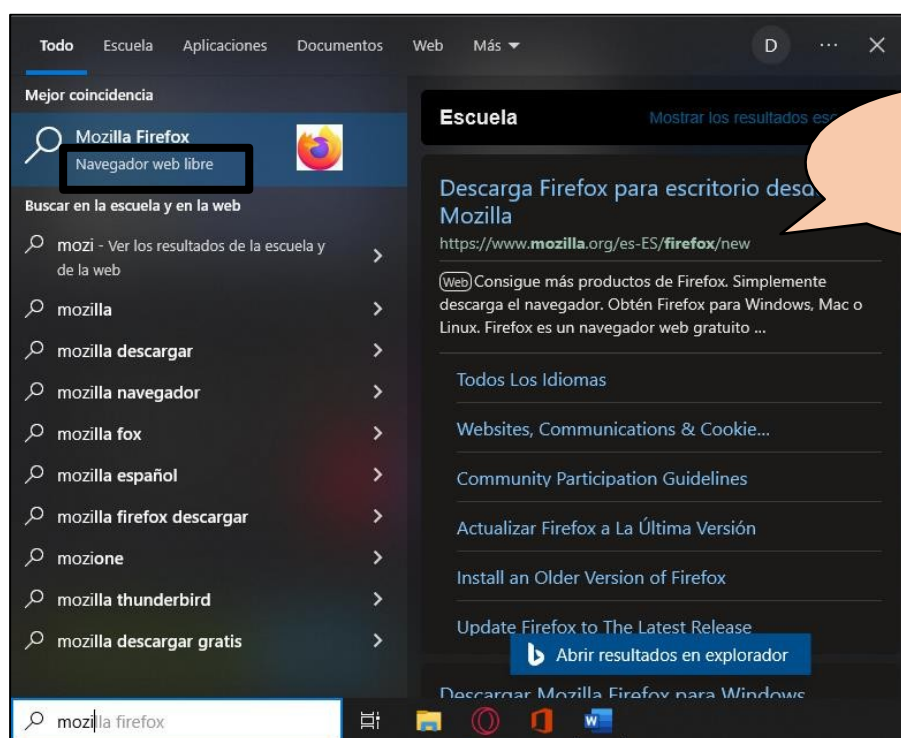

Image 3

As we can see in image 3, the word that stands out is "Free Web Browser", that is, we do not have the browser, and what we see is a link to download the browser.

2. Once we have identified our browser and double clicked on it, it will appear as follows:

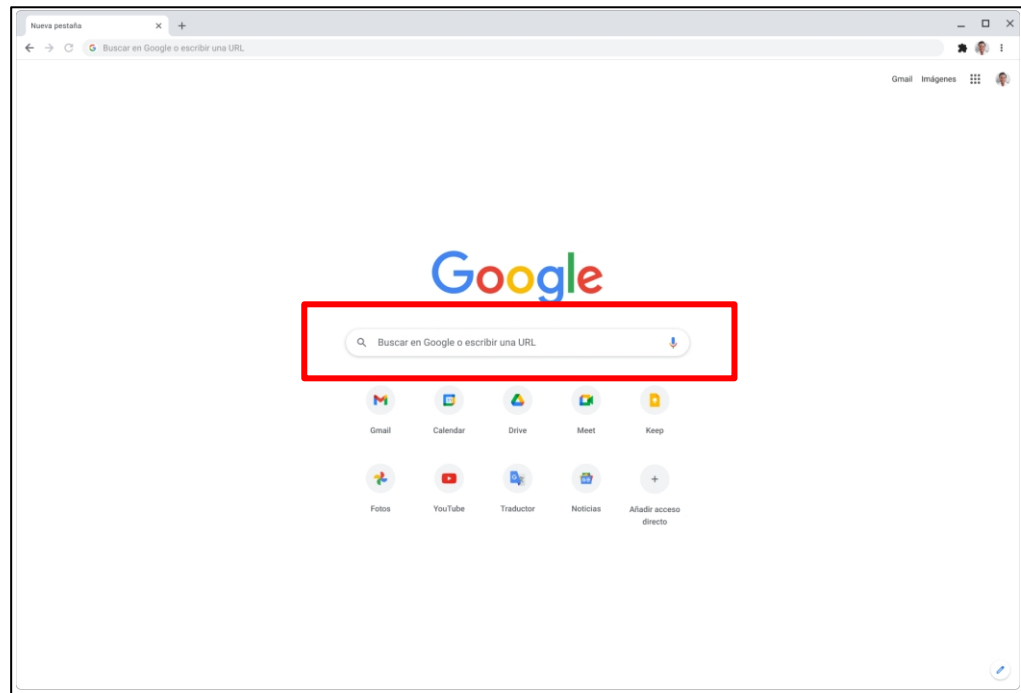

Image 4

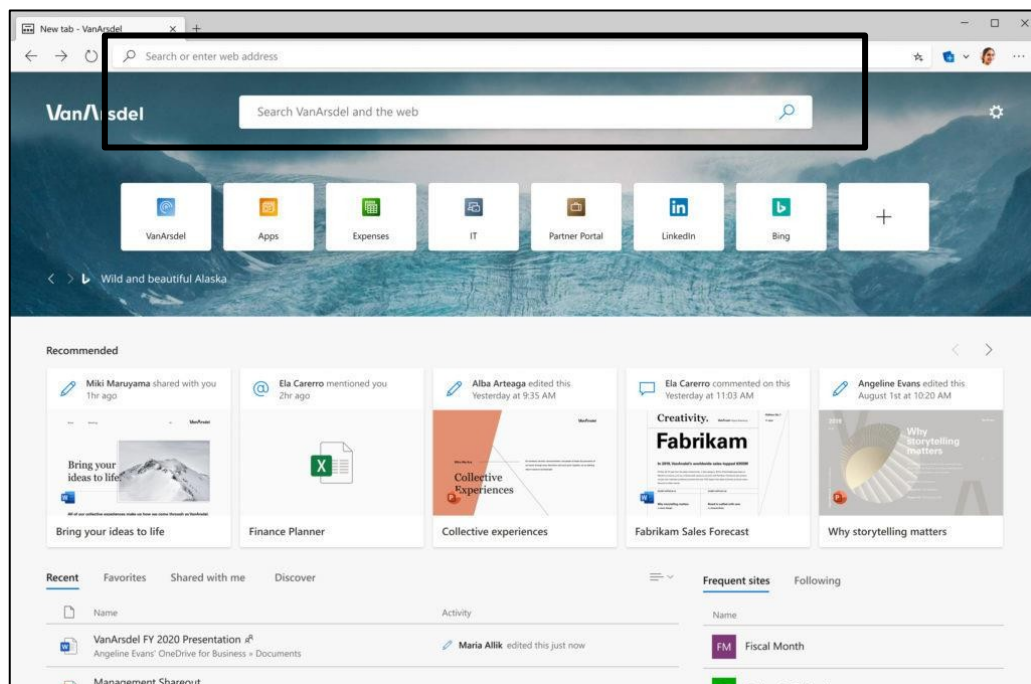

Image 5

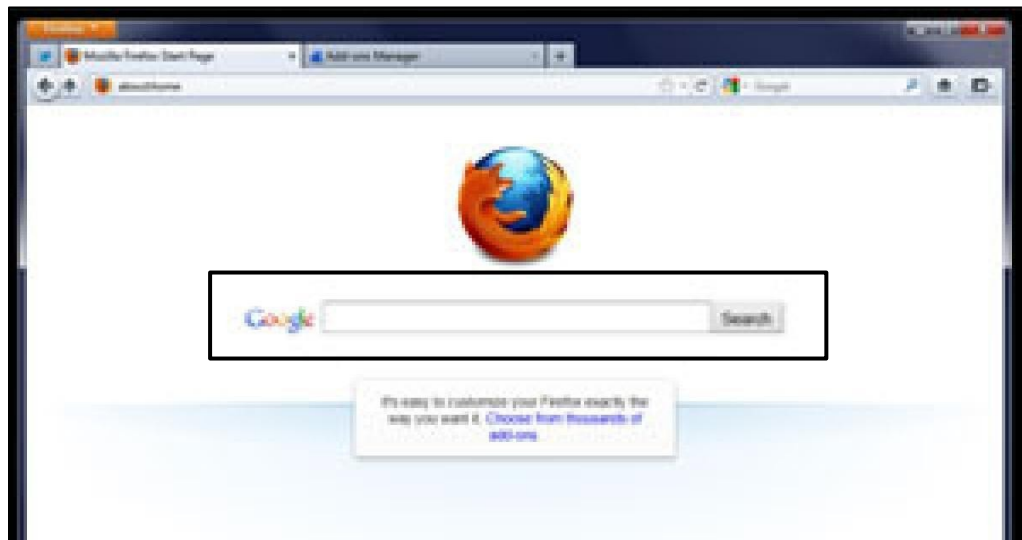

Image 6

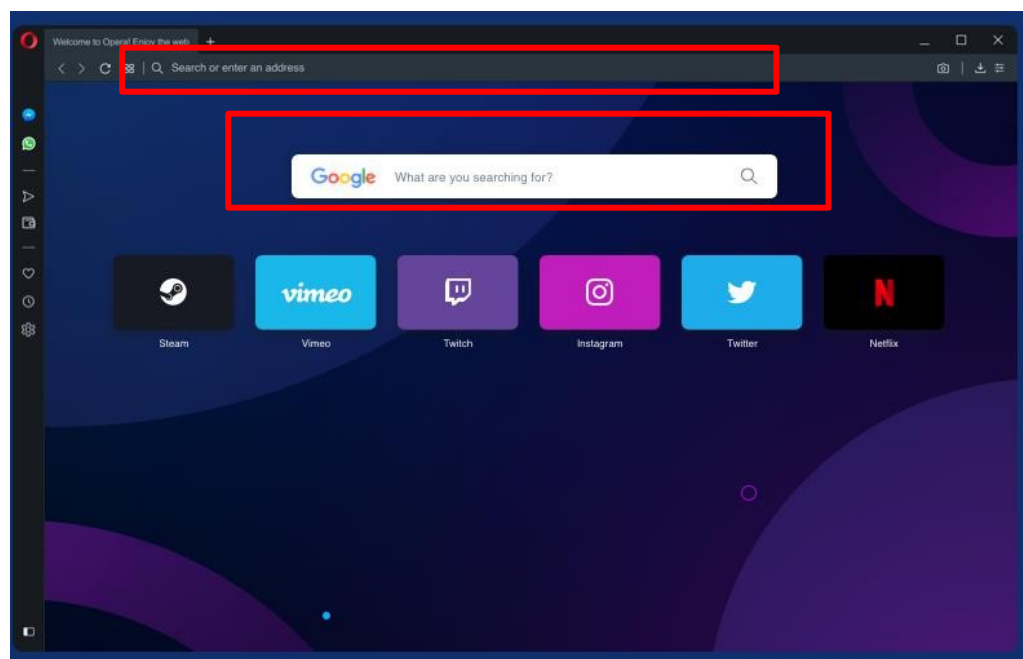

Image 7

As we can see in the images (4, 5, 6, 7) a red box is highlighted, where we can see a magnifying glass or the word "search", accompanied by "Google" except for Microsoft Edge (image 5). In this box, you have the possibility to enter any search you want.

3. We perform the search by typing keywords about what we want:

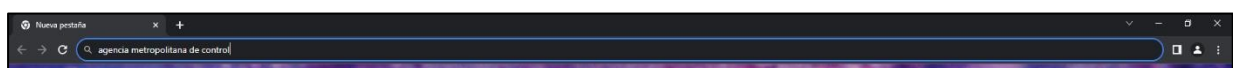

Image 8

In this case, a specific search for "Metropolitan Control Agency" is carried out (image 8). After entering the search, we simply press the "Enter" key on our keyboard. Sometimes, when entering the word, the search engine may offer a list of options (results). If your search appears in this list, you can select it with a double click, avoiding having to type the whole phrase or all the words included in your search (image 9).

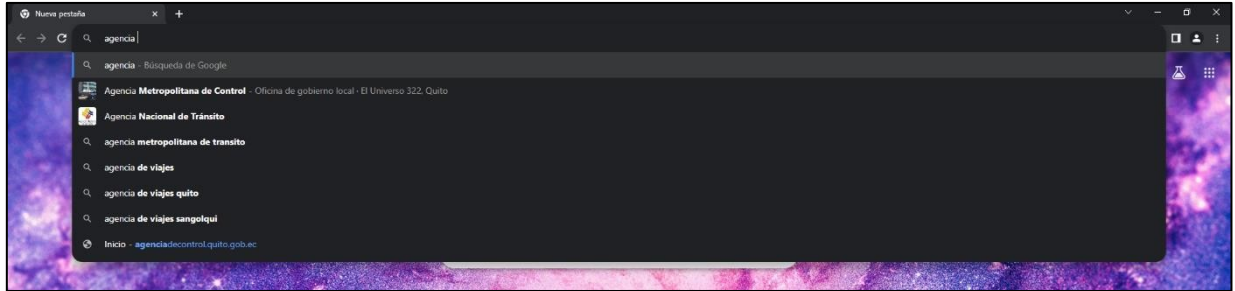

Image 9

After performing the search, it proceeds to display all the available content according to your search. In this case, click on the first link (image 10).

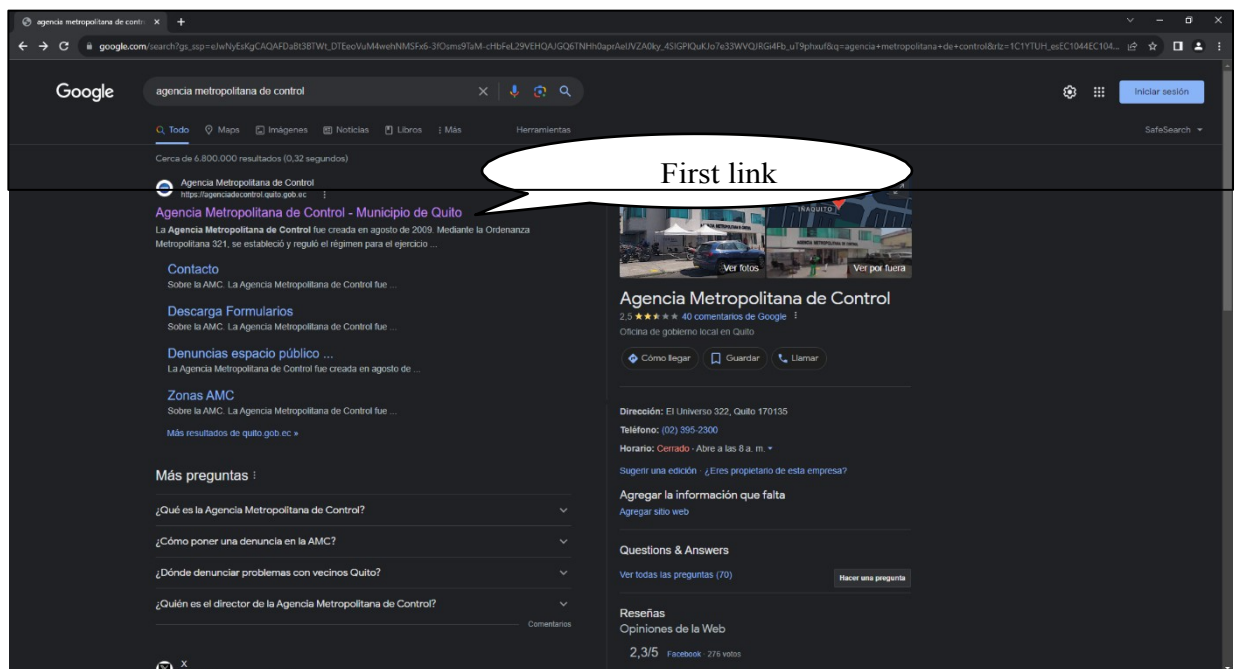

Image 10

4. Navigate to the selected link (image 11).

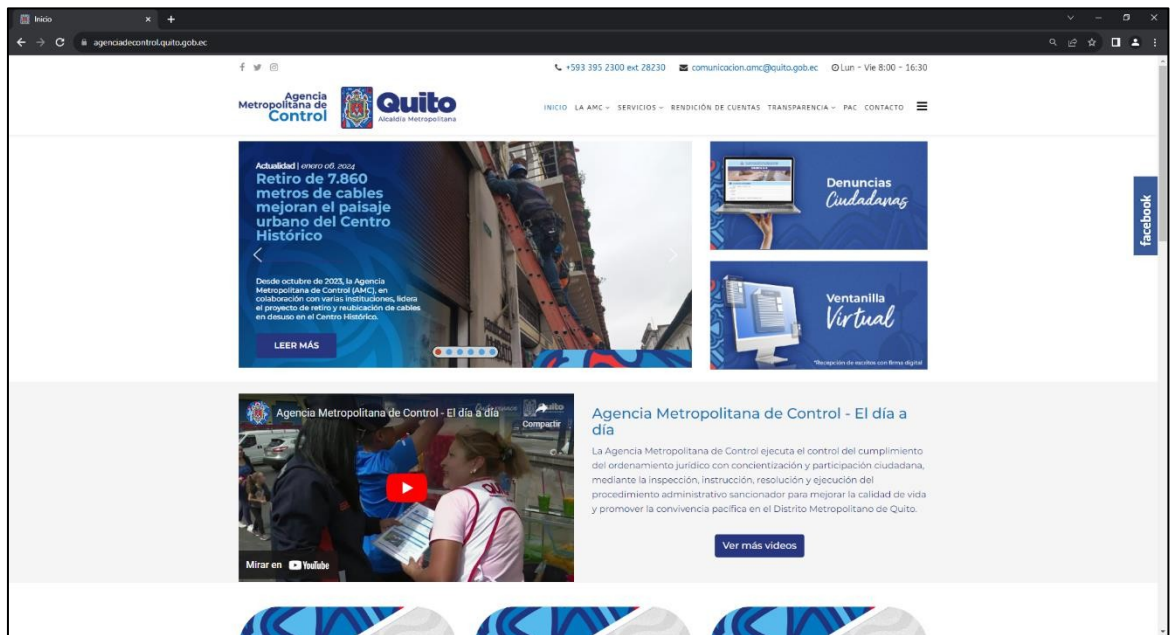

Image 11

The scroll bar allows us to move up and down the page, and on some pages we also find a horizontal bar that facilitates scrolling from left to right. Although not all images contain a "Menu", it was pointed out at the beginning of the manual that the pages have "menus" for navigation. Clicking on this "menu" reveals a series of options (image 12) and, with a click, we can directly access these options.

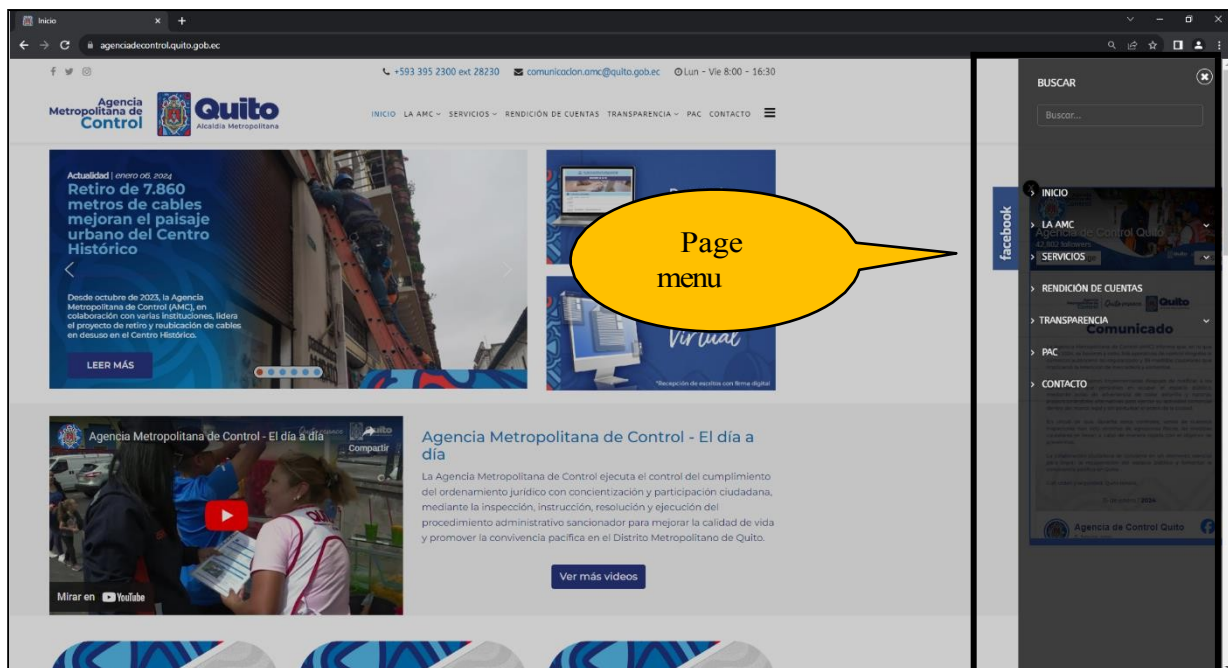

Image 12

### 7.3. E-mail address

There are several email managers to which we can access, in this case, Outlook is given as an example, however, for all of them the steps are similar, what changes is in the search engine, change the search for Gmail, Yahoo or Outlook.

1. Open your favorite web browser and perform the Outlook search and select the first link (image 13).

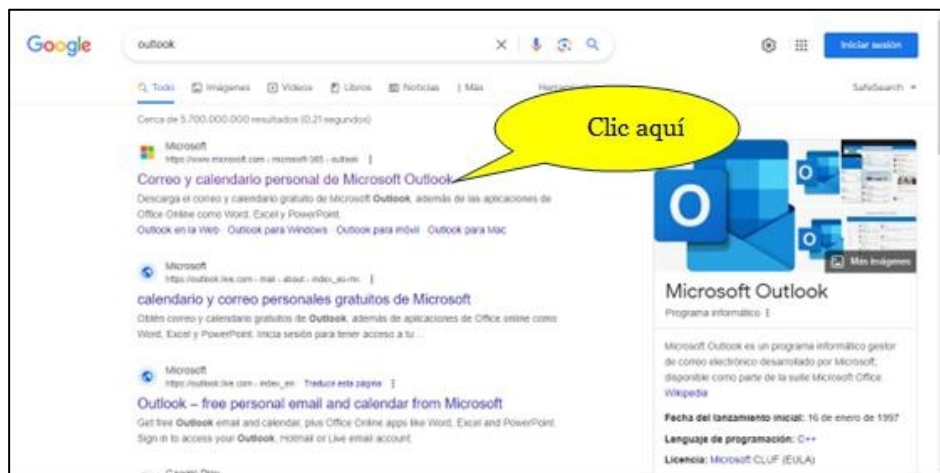

Image 13

2. Once we enter our link we proceed to "create a free account" or "register" (image 14).

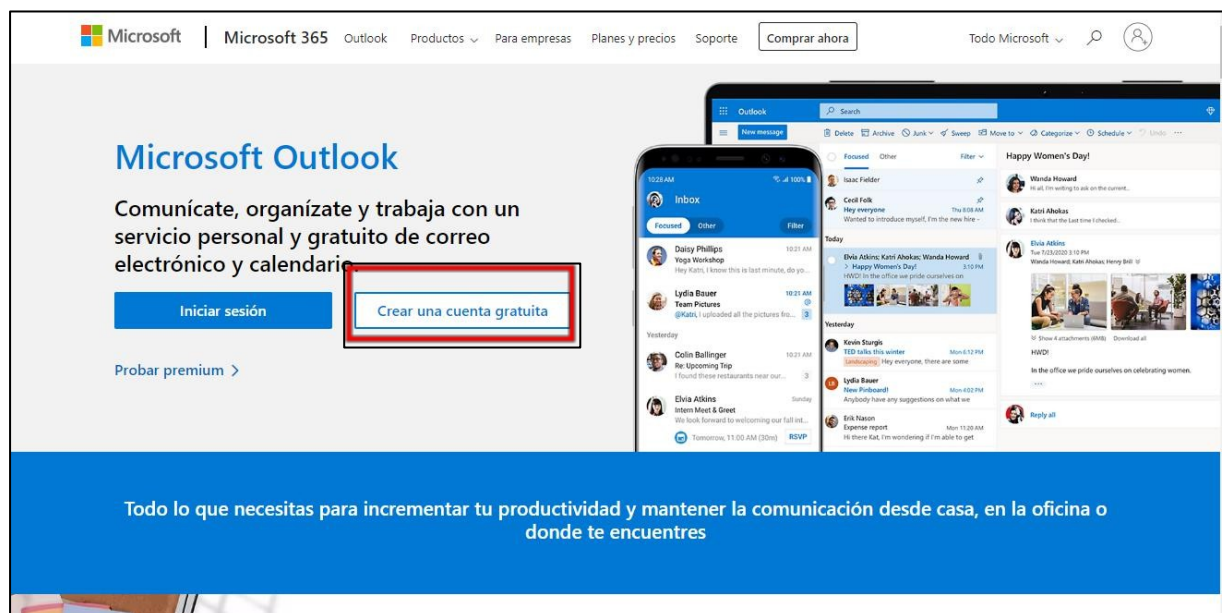

Image 14

3. We proceed to fill out the form, where we will be asked for data such as name, surname, date of birth, sex, e-mail, password (image 15, 16, 17, 18).

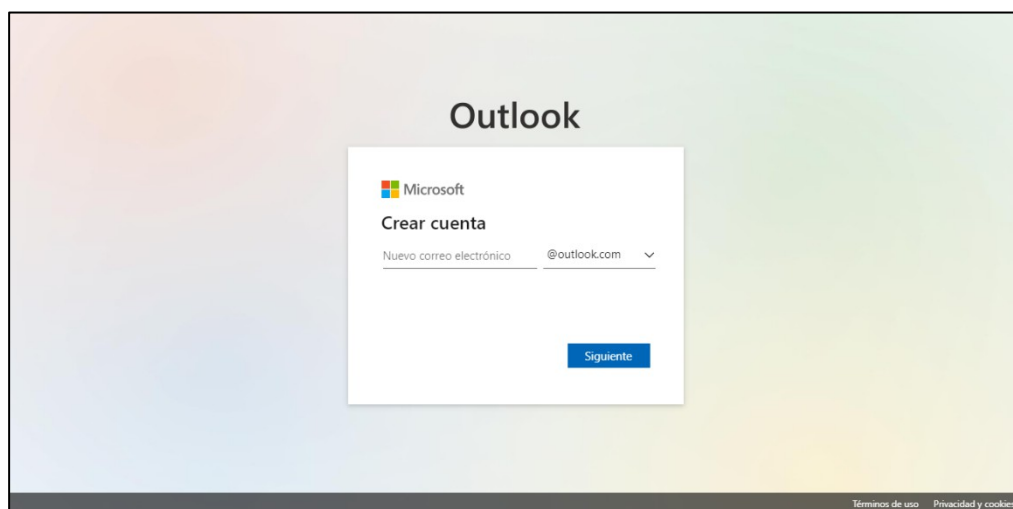

Image 15

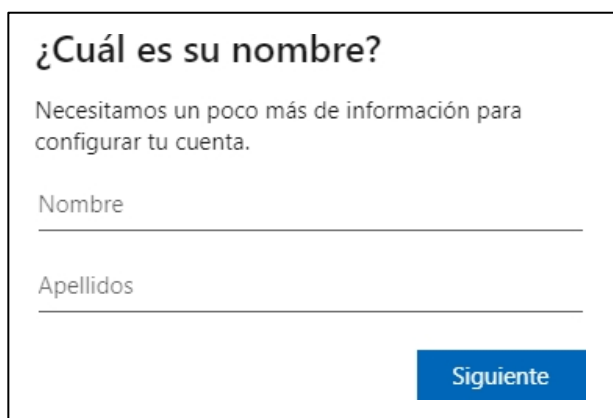

Image 16

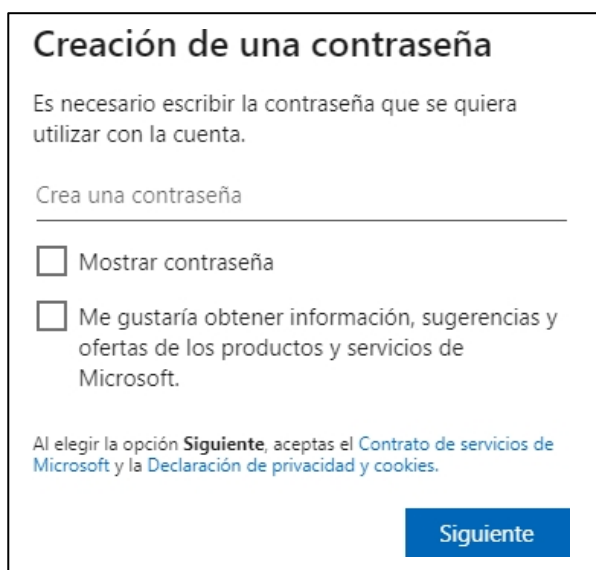

Image 17

Image 18

In the images above we can see the frequent questions for the creation of your account, then the verification mode, where you must type the characters that appear on the screen and you have an outlook account (image 19).

## Crear cuenta

Antes de continuar, queremos asegurarnos de que es una persona real quien está creando esta cuenta.

Nuevo

Escribe los caracteres que veas

---

Siguiente

Image 19

To be able to "Login" is the first step and instead of registering click on "Login" (image 14).

#### 7.4. Get to know your Mail Interface

Once the account is created we have our email ready to receive and send messages, the interfaces are similar, so you will always find these keywords.

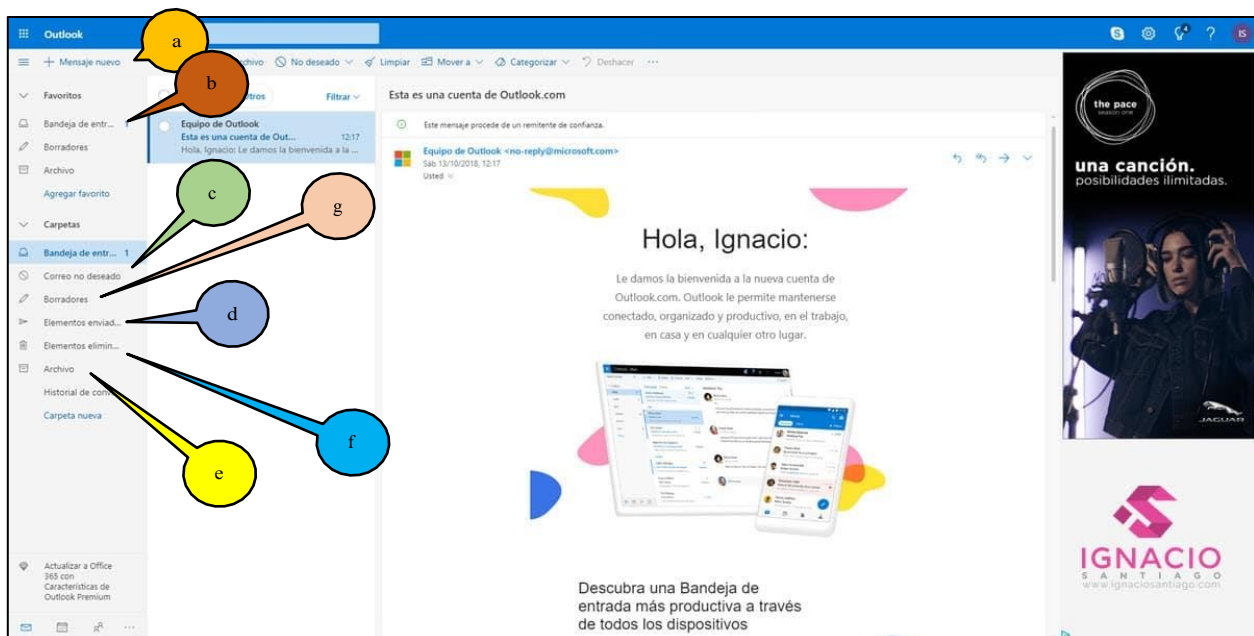

Image 20

### Here we can observe different tools image 20:

- a) **New message.** - Here we can start composing our message.
- b) **Inbox.** - Where all incoming messages will be saved.
- c) **Spam mail.** - Here we can find spam mail.
- d) **Sent items.** - Here we can review the messages that we have sent.
- e) **Archive.** - Messages that we store.
- f) **Deleted items.** - If we delete a message and we want to recover it, we can find it here.
- g) **Drafts.** - When we write a message and do not send it, it goes to drafts, where we leave it.

## 7.5. Create message

1. Choose New mail to start a new message.
2. Write a name or a address of e-mail address e-mail address at in the To, Cc or Bcc field.
3. If you do not see BCC, see [Show, hide and view the BCC box.](#)
4. In Subject, type the subject of the e-mail message.
5. Place the cursor in the body of the e-mail message and then start typing.
6. After typing the message, choose Send.

See image 21

The image shows a screenshot of an email composition interface. At the top, there is a blue button labeled 'Enviar' with a dropdown arrow. To the right of the button, there is a status bar showing 'Sin etiqueta' with a dropdown arrow, a trash icon, and a plus icon. Below the button, there are two input fields: 'Para' (To) and 'CC'. The 'Para' field has a vertical line next to it, and the 'CC' field is empty. Below these fields, there is a text input field for the subject, labeled 'Agregar un asunto'. At the bottom, there is a large text area for the body of the email, labeled 'Escriba / para insertar archivos y más'.

Image 21

- **CC or Carbon Copy:** This is a public copy, so both the main recipient(s) and the users placed in copy will be able to see to whom else the mail is being sent.
- **BCC or Hidden Carbon Copy:** This is a private copy, so neither the main recipient(s) nor the users placed in copy will be able to see to whom else the mail is being sent.

## 7.6. Videoconferencing

1. In your browser, type zoom.us, if you do not have an account click on "register, it's free", otherwise log in (image 23).

Image 23

2. You will need to verify your age (image 24).

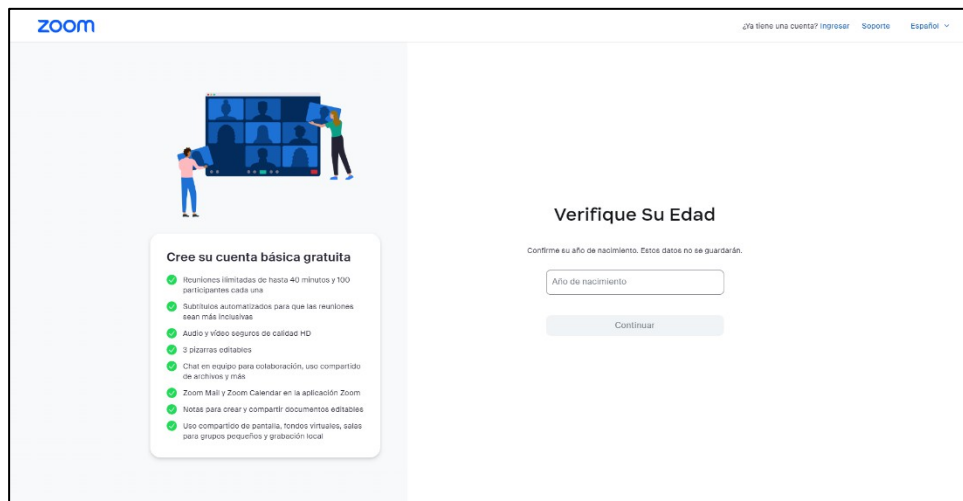

Image 24

3. Next, you will enter your e-mail address (image 25), and a verification message will be sent to the e-mail address provided, and you will fill in that code (image 26).

Image 25

Image 26

4. You will have to enter a password, and you will have your Zoom.

## 7.7. Getting to know ZOOM

In image 27 we can see the main zoom screen when accessing a meeting, the highlighted box allows us to activate and deactivate the camera with a left click.

Image 27

Image 28, in order to deactivate and activate the microphone with a left click.

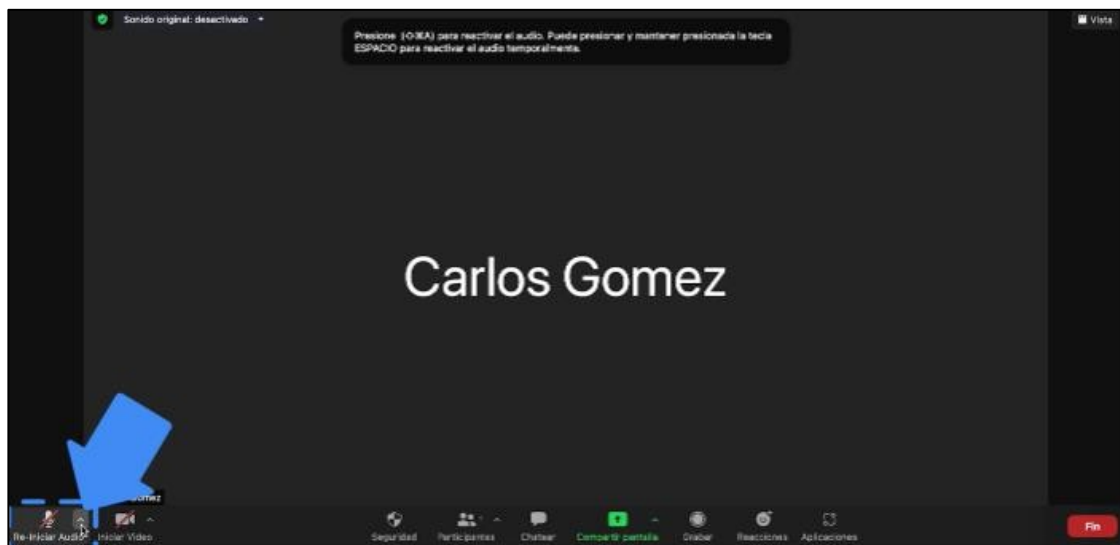

Image 28

In order to communicate through messages we have to chat (image 29) with left click.

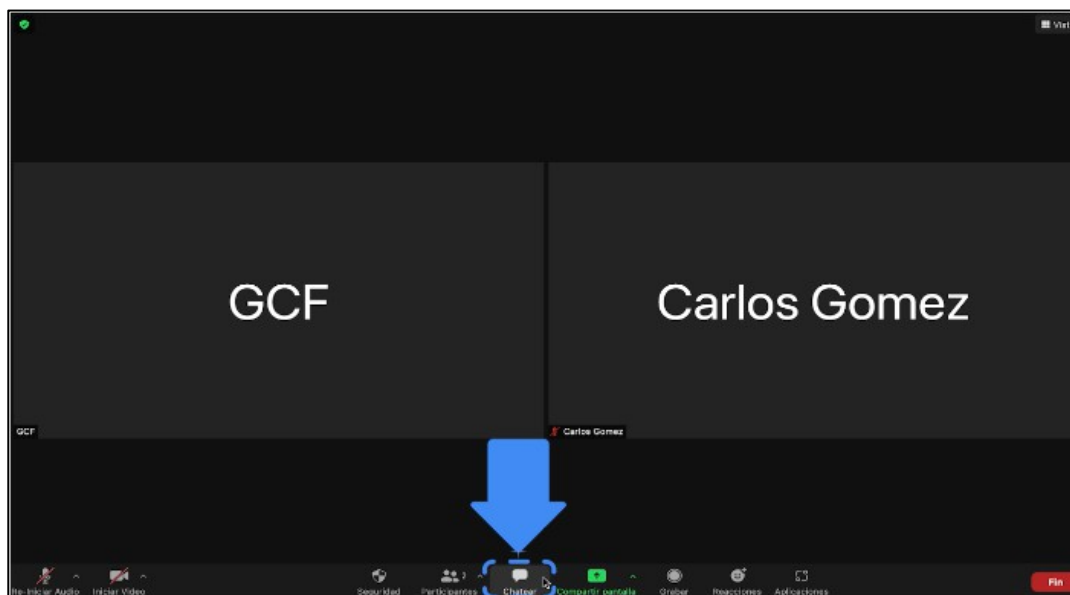

Image 29

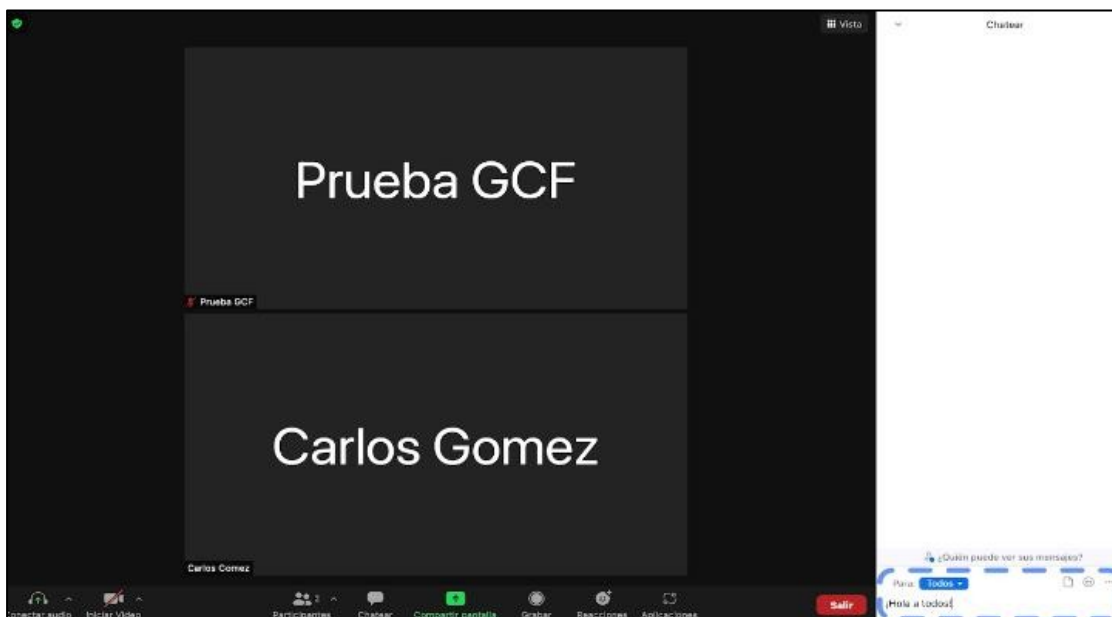

Image 30

Next, a chat window will appear on the right side, where we must go to the bottom and click on the box that says "Write your message here" (image 30).

You can choose the privacy of who to send the messages to in the case of image 30, we can visualize from where we write the message we have the word "All", this gives us the indication to send the message to all the participants of the meeting, we can choose to send a message to a single participant, we can also observe an icon with a smiley face, where we can add emoticons to our messages.

To attach any type of files through the chat window, click on the icon in the shape of a sheet of paper, where you can upload a file from the cloud, computer, etc. (image 31).

Image 31

## 7.8. Content Streaming

### YouTube:

1. In our browser we search for [www.youtube.com](http://www.youtube.com), to be directed directly to the Youtube page.

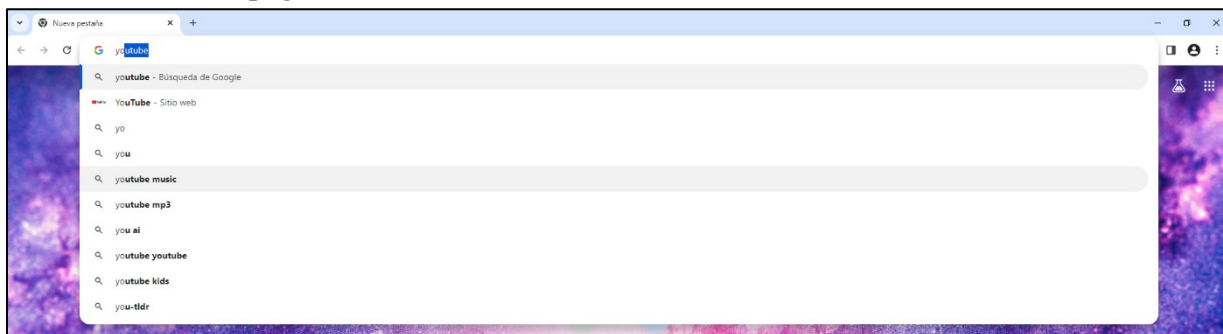

Image 32

2. We know the interface

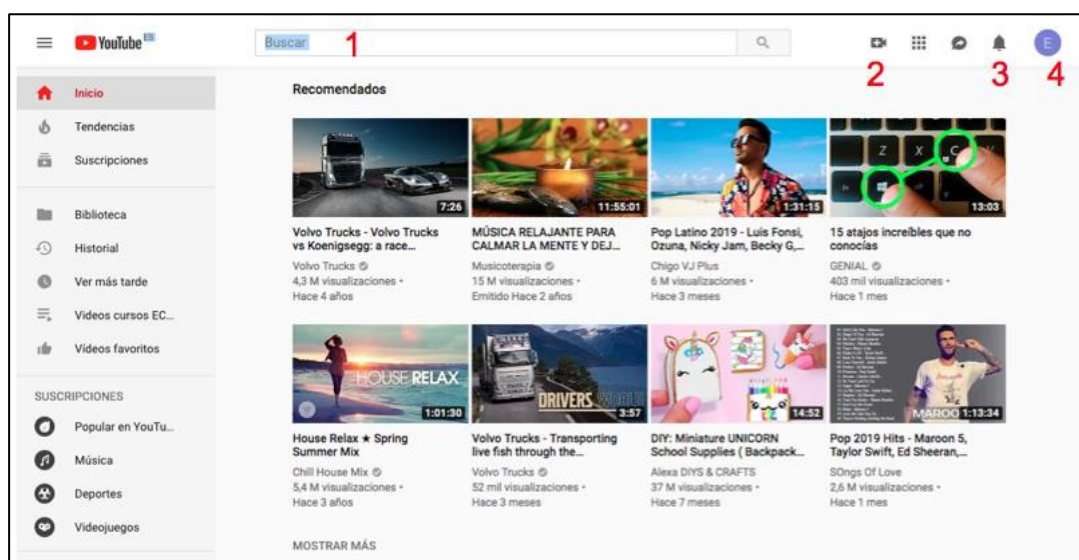

Image 33

In the upper section, you can search (1) for any video using its name, theme or related terms. In the same panel, you will find the options to upload a new video (2), check your notifications (3) and access your account options (4), this account is to observe which user, that is, which Gmail account is logged in, it is not necessary to be logged in.

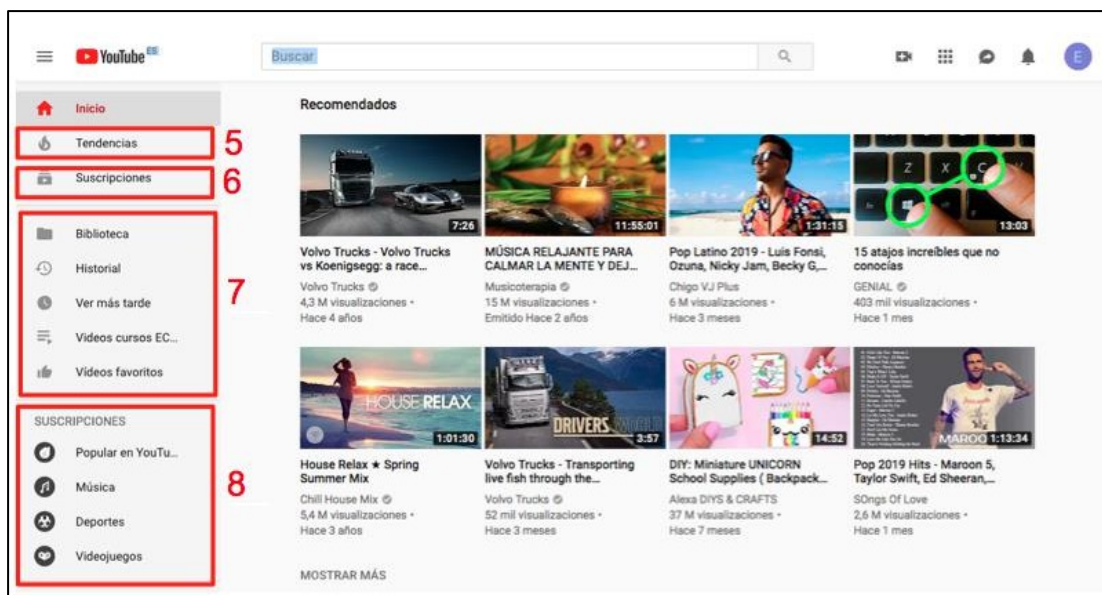

Image 34

On the left side, you can explore the current trends on YouTube (5), which include videos with high numbers of views, likes and comments. Using the subscriptions button (6), you can quickly access the latest updates from the channels and users you follow on YouTube.

In the library section (7), you will find your history of played videos and playlists, both the automatic ones generated by YouTube and those you have personally created. Below, in your subscriptions (8), all the channels you are subscribed to are organized and sorted by category.

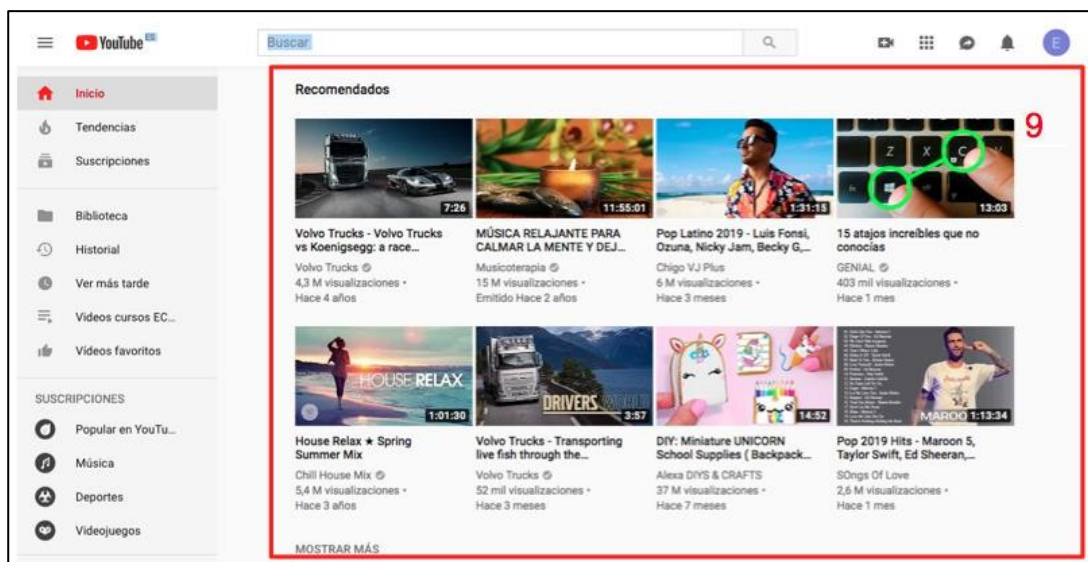

Image 38

This shows the recommendations (9) that YouTube makes for you based on your viewing and search history.

## 7.9. Online security

1. Secure Passwords: In any application that requires login, the choice of a secure password is crucial. To ensure security, it is essential to meet certain criteria, such as including upper and lower case letters, special characters, numbers, among others.

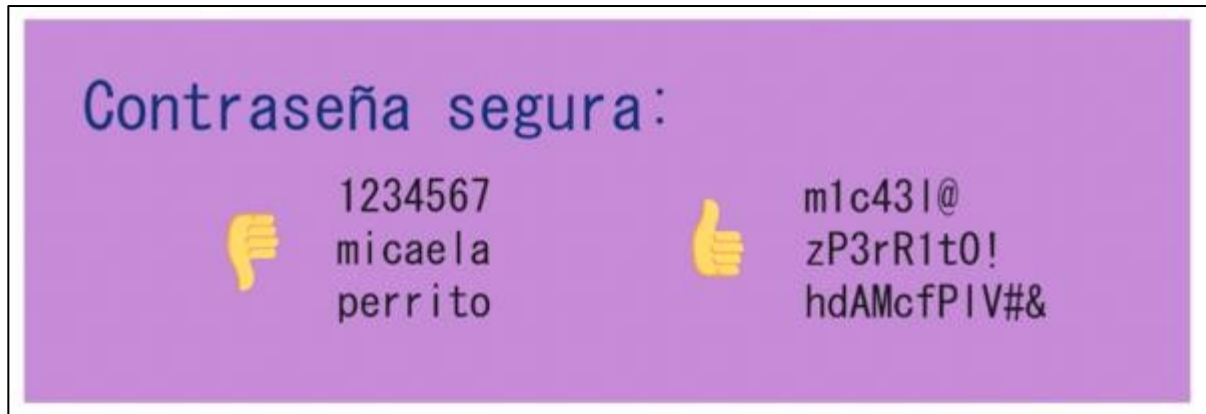

Image 36

2. Email spam is a form of unsolicited communication sent to a large number of recipients for the purpose of advertising products, services or simply to generate traffic or scams.

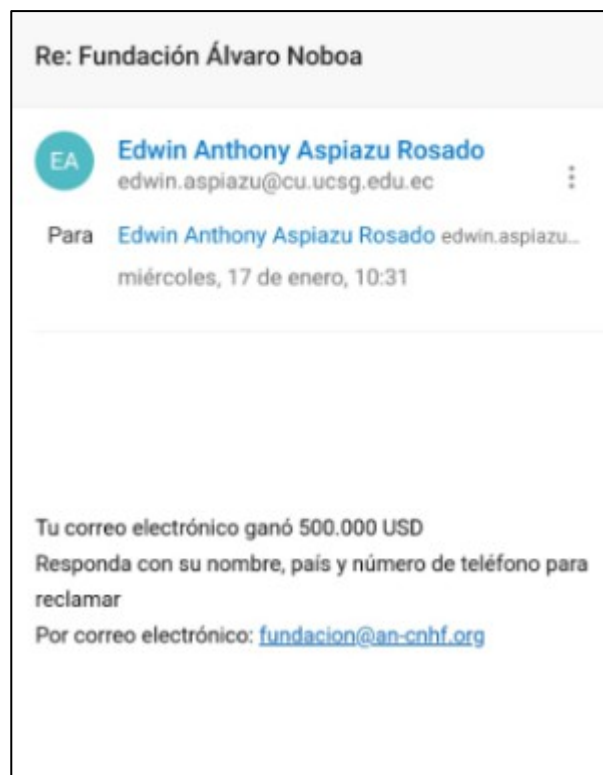

Image 37

3. https: ensures a good connection between client and server, i.e. unauthorized persons cannot intercept the page.

Image 38

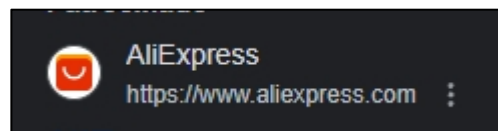

Image 39

4. An antivirus helps us to keep our computer ready, in this case, Avast Antivirus is a free and secure version.

4.1 In our browser we look for Avast Antivirus, click on the first link

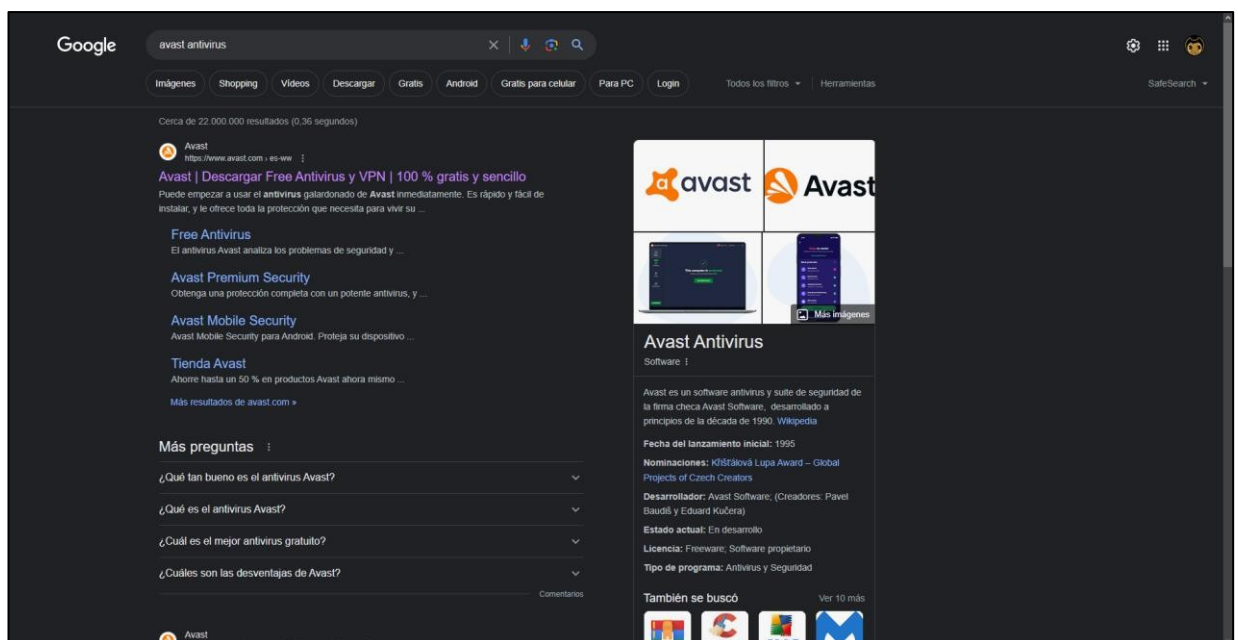

Image 40

4.2 When entering there will be the download option, and we proceed to download it.

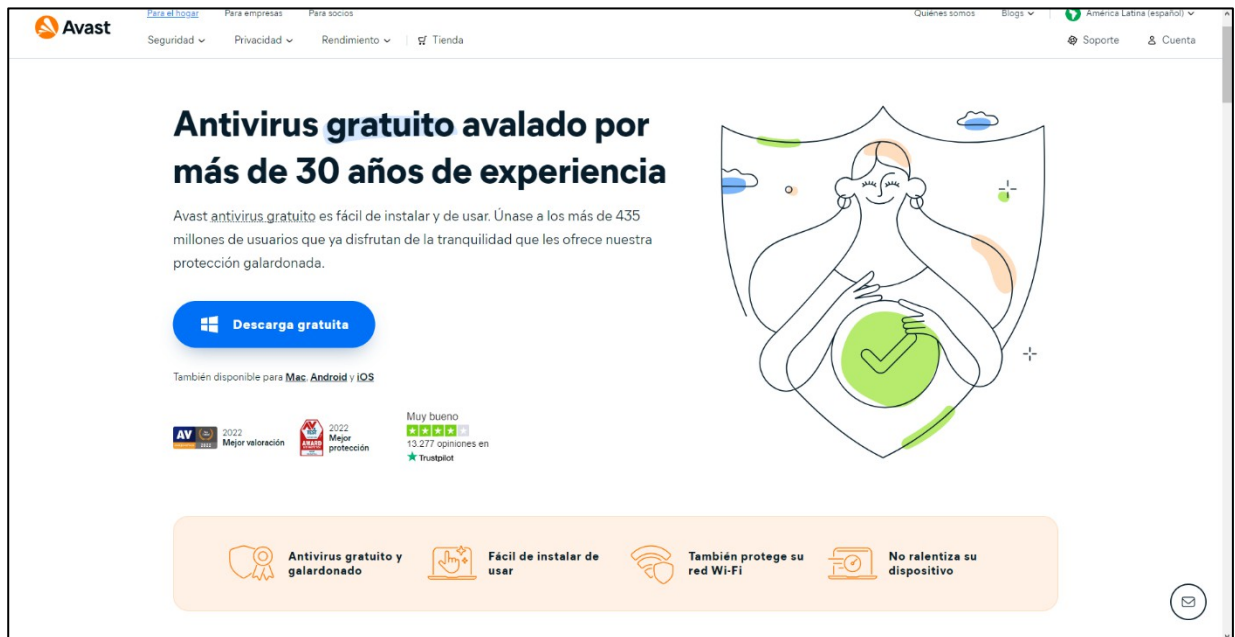

Image 41

4.3 We open the download document and accept the installation.

## 7.10. Buy Online:

### 1. Use Networks and a secure website

Never rely on open or free wireless networks for transactions as they may be capturing your browsing history.

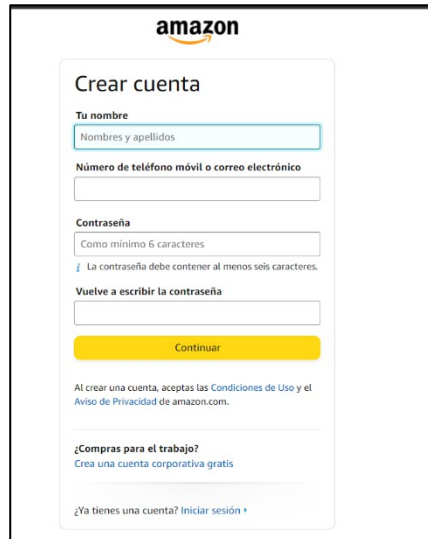

Always look for the little padlock in the browser on every page that means that your navigation is safe and has security standards.

There is a lot of misleading advertising, do not fall for it, it usually arrives to your email, do not follow the link and go to the official site and make sure it has the padlock.

### 2. Create an account

To buy in almost all secure sites you have to create an account, in which you will have to enter your contact email, your address (place where the items will be sent to you) and in some cases even your phone number.

This account can be created at any time, not necessarily when you are going to buy something.

### 3. Search for your desired product

First make a thorough search of what you want to buy, there will be many promotions, prices and brands, you yourself will know what suits you.

In this case always read the comments of the users, what they buy the most and the recommendations they make of producers related to your search.

### 6. Finalize your purchase

Once you have decided which is your payment method and verified that your items are the correct ones, click finish and your purchases will be shipped.

### 7. Receive your package

Congratulations! You've made your purchase, now you just need to wait, but it's that quick and easy!

## 8. Frequently Asked Questions

- **How do I save an image I find on the Internet?** Answer: Right click on the image you want to save and select "Save image as". Choose the location on your computer and click "Save".
- **What does it mean to "log in" to a web page and how do I do it securely?**  
 Answer: Logging in means accessing your account on a web page. Look for the "Login" option on the page, provide your username and password and make sure the connection is secure (https:// in the URL).
- **How can I protect my password online?**  
 Answer: Use strong passwords combining letters, numbers and special characters. Avoid obvious passwords. Don't share your password and consider using a password manager for added security.

- **What precautions should I take when shopping online?** Answer: Buy only from secure and well-known sites. Verify that the URL begins with "https://". Do not enter sensitive information on unsecured sites. Check privacy policies and verify the seller's authenticity.
- **How do I log out of a web page correctly?** Answer: Look for the "Logout" option usually located in the upper right corner. By logging out, you ensure that no one else can access your account from that device.

## • Glossary

| Term            | Description                                                                                                                                                                                                                                  |
|-----------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
